

1. Universal Enrollment Regression Coverage – Prime V3

Purpose

This module validates the **Universal Enrollment (UE)** flow for all **Direct and State-Specific 529 plans** under the **Prime V3 framework**. It ensures end-to-end coverage for enrollment creation, continuation, UPromise integration, multiple beneficiaries, promotional enrollments, and matching-grant programs.

The suite runs within the **GitLab + Maven + Nexus** ecosystem and supports unified enrollment logic across multiple plans (MDD, NMD, IDD, PAG, NDD, DCD).

Owner	QA Automation Team
Framework Version	Prime V3
Environment	Stage 1
Suite Name	Universal Enrollment Regression Test Suite – Stage 1 Environment
Suite File Path	prime-test-automation/unite/unite-universal-enrollment/bin/regression/daily/universal-enrollment-stage1.xml
Runner Type	core.runner.ParallelFeatureRunner
Trigger	Manual / Scheduled via GitLab
Build Tool	Maven (clean test -Pue-regression)
Artifact Repository	Nexus
Reporting	Surefire + TestNG HTML
qTest Link	(To be added after integration)

Test Suite Summary

Metric	Value
Total Tests (Plans)	11
Total Methods	138
Execution Time	~3.5 hrs
Thread Count	1
Execution Environment	Stage 1 (UE Projects)
Pipeline Trigger	GitLab CI / Maven Job
Test Tags	@regression,@dailyrun

Plan and Feature Coverage

Plan Code	Flow / Feature	Feature File	Runner	Tags
MDD	Standard Individual Enrollment	UniversalEnrollmentPositive.feature	ParallelFeatureRunner	@regression @dailyrun
NMD	Standard Individual Enrollment	UniversalEnrollmentPositive.feature	ParallelFeatureRunner	@regression @dailyrun
IDD	Standard Individual Enrollment	UniversalEnrollmentPositive.feature	ParallelFeatureRunner	@regression @dailyrun
MDD	Continue Enrollment Flow	UniversalContinueEnrollment.feature	ParallelFeatureRunner	@regression @dailyrun

NMD	Continue Enrollment Flow	UniversalContinueEnrollment.feature	ParallelFeatureRunner	@regression @dailyrun
MDD	Multiple Beneficiaries Enrollment	UniversalEnrollmentMultipleBeneficiaries.feature	ParallelFeatureRunner	@regression @dailyrun
MDD	Upromise Integration	UniversalEnrollmentUpromise.feature	ParallelFeatureRunner	@regression @dailyrun
NMD	Upromise Integration	UniversalEnrollmentUpromise.feature	ParallelFeatureRunner	@regression @dailyrun
PAG	State-Specific Enrollment	UniversalEnrollmentPagsp.feature	ParallelFeatureRunner	@regression @dailyrun
NDD	Matching Grant Program Enrollment	UniversalEnrollmentMatchingGrant.feature	ParallelFeatureRunner	@regression @dailyrun
DCD	Promo Code Enrollment	UniversalEnrollmentPositivewithPromocode.feature	ParallelFeatureRunner	@regression @dailyrun

Execution Overview

Result Type	Count / Examples
Passed Scenarios	122 – Includes standard enrollment, BYO/Payroll funding, rollover, KIS flows.
Failed Scenarios	16 – Mainly “Continue Enrollment” save/close steps and Upromise cases (see below).
Duration	3 hours per full run.
Execution Mode	Parallel across plans with 1 thread per plan.
Reports	Generated in Allure and TestNG HTML (available under GitLab artifacts).

Observed Failures

Area	Example Scenario	Observation / Possible Cause
Continue Enrollment (MDD /NMD)	“Save and close on Account Owner Address section...”	Timing sync issues after form save; investigate loader overlay timing.
Upromise Integration	“Single Universal Enrollment using Upromise Enrollment with Upromise”	API token timeout / redirect flakiness.
Matching Grant Enrollment	“Single Universal Enrollment using Matching grant with check Funding...”	Environment data dependency – grant eligibility flag.
Promo Code Enrollment	“Single Universal Enrollment with Bene as Myself...”	Promo code validation edge case; requires refresh token.

Automation Highlights

- **Unified Enrollment Flow** – Single feature template valid for multiple plans and custodians.
- **Dynamic Traunch Tagging** for plan-specific data segregation.
- **Data-driven scenarios** using CSV + DB queries via Prime Core Utilities.
- **Upromise integration automation** via secure API token validation.
- **Fully GitLab-driven pipeline** with Nexus artifact tracking and Allure reporting.

Recommendations / Next Steps

Action	Priority	Owner
Stabilize continue-enrollment scenarios (using explicit waits).	High	QA Automation Team
Implement retry logic for Upromise flows.	Medium	Framework Team
Integrate qTest API sync for Prime V3 pipeline.	Medium	Automation Ops
Optimize execution time via increased parallel threads.	Low	DevOps Support
Add auto report links in GitLab Artifacts.	Low	CI/CD Team

Maintenance Guidelines

Frequency	Action
Daily	Monitor pipeline runs & flaky tests summary.
Weekly	Review failure patterns and update test data.
Monthly	Sync with qTest & Nexus artifact versions.
Quarterly	Refactor obsolete scenarios & update plan coverage.
