

Automation Regression Suite – Master Overview

Purpose

The **Automation Regression Suite** serves as the central repository for all regression testing initiatives under the **Unite (Prime)** platforms — including **Prime Version 2 (Legacy Jenkins-based)** and **Prime Version 3 (Modern GitLab-based)** frameworks.

It ensures **end-to-end validation**, **cross-plan coverage**, and **continuous integration stability** across all 529, ABLE, and CSR systems, while enabling visibility into **daily automation health, coverage, and evolution**.

Framework Evolution

Version	Framework Stack	Pipeline / CI	Artifact Repo	Reporting	Status
Prime V2	Java + Selenium + TestNG	Jenkins	Shared Reports (Stage1)	TestNG HTML + qTest	Active (Daily)
Prime V3	Java + Selenium + Cucumber + Maven	GitLab CI/CD	Nexus	Allure + TestNG	Setup Phase (UE Projects)

Structure

Automation Regression Suite

- 1 Unite / Prime V2 Regression Suite – Overview
 - Enrollment – Automation Regression Suite (Prime V2)
 - Legacy Web Registration – Automation Regression Suite (Prime V2)
 - Legacy Web Login – Automation Regression Suite (Prime V2)
 - CSR Account Maintenance – Automation Regression Suite (Prime V2)
 - Contributions – Automation Regression Suite (Prime V2)
 - Make a Withdrawal – Automation Regression Suite (Prime V2)
 - Balance Page – Automation Regression Suite (Prime V2)
 - Sardine Regression – Automation Regression Suite (Prime V2)
- 2 Unite / Prime V3 Regression Suite – Overview
 - Universal Enrollment Regression Coverage – Prime V3
 - Automation Regression Suite – Daily Validation Guide

Regression Snapshot

Suite	Modules	Execution Mode	Run Frequency	Reports	Coverage
Prime V2	8	Jenkins CI	Daily @ 1 AM EST	TestNG + qTest	~95% of core 529 flows
Prime V3	(Expanding)	GitLab CI	Scheduled (UE Projects)	Allure + TestNG	Initial rollout (~40%)

Coverage Highlights

Prime V2

- Legacy 529 + ABLE automation coverage across enrollment, contribution, withdrawal, and maintenance.
- Regression health maintained via Jenkins pipelines, qTest dashboards, and environment-ready data sets.

Prime V3

- Unified UE (Universal Enrollment) automation framework with Maven + GitLab integration.
- Supports artifact versioning, Nexus build management, and modularized feature-based execution.

Usage & Navigation

Section	Purpose
Unite / Prime V2 Regression Suite – Overview	Full breakdown of legacy Stage 1 regression coverage and Jenkins-based execution.
Unite / Prime V3 Regression Suite – Overview	Future-ready GitLab CI regression for UE and modernized platform modules.
Automation Regression Suite – Daily Validation Guide	Shared operational checklist for daily validation, monitoring, and CI health reporting.

Key Benefits

- **Unified Visibility:** One-stop hub for both Prime versions.
- **Traceability:** Links TestNG XMLs · GitLab/Jenkins · qTest Dashboards.
- **Scalability:** Easily extendable for future modules (Performance, API, Astro).
- **Governance:** Maintains consistent documentation and release-readiness across frameworks.

Next Enhancements

- Integrate **qTest APIs** for real-time status sync (V3).
- Establish **automated Confluence report publishing** from CI pipelines.
- Add **performance regression dashboards** for UE and Astro projects.
