

3. JIRA Kanban QA Project – Knowledge Transfer Document (KT)

Project: **QA Automation**
Project Key: QA
Project Type: Company-Managed Kanban Project
Objective: Build a centralized, traceable, efficient, and automation-led QA engineering ecosystem — including regression, performance, and CI integration.

1. Kanban Board Configuration (Jira Board)

Columns & Statuses

Column	Statuses Mapped	Description
BACKLOG	BACKLOG, PRIORITIZATION	Initial idea or unreviewed intake stories
TO BE ANALYZED	READY TO REFINE, REFINEMENT	Analysis, scoping, dependency checks
TO DO	TO DO	Ready for development or automation to start
IN PROGRESS	IN PROGRESS, QA IN PROGRESS	Active development or test case scripting ongoing
IN REVIEW	REVIEW	Pending peer review or approval
VALIDATION	VALIDATION, BUILD	CI validation, smoke execution, staging checks
DONE	DONE, DELIVERY	DoD checklist met, ready to close or closed
BLOCKED	WILL NOT IMPLEMENT	Deliberately paused or will not proceed

2. Standard Label Glossary

Label	Purpose
automation	General automation-related story or task
performance	Performance-related test setup, execution, tuning
smoke	Indicates test belongs to the smoke suite
regression	Test item belongs to core regression suite
flaky	Known instability or intermittent failures
blocked	Actively blocked items, prevent progress
onboarding	For team setup, doc creation, onboarding-related efforts
sla	Linked to time-based SLA monitoring or configuration
template	Involves reusable YAML, framework config, or sample test cases

3. Swimlane Strategy

Method: JQL-based custom Swim Lanes

Name	JQL Query	Purpose
Expedite	priority = Critical	Urgent, must-go items
Blocked/Flaky	labels in (blocked, flaky)	Monitor unstable, flaky, or blocked items
High Priority	priority = High	Business-flagged as high priority

General Automation	labels in (automation, automatedtesting, automationoptimization)	Active automation items
Prod Support/QA	labels in (prodsupport, production_support, prodtesting)	Production-impacted issues
Smoke & Regression	labels in (smoke, regression, regression_testing)	Track suites and coverage
Performance Work	labels in (performance, performancetesting)	Track performance testing and profiling work

4. Saved Filters

These filters are used in:

- Board filters
- Dashboard gadgets
- Automation triggers

Name	JQL
Active Automation Stories	project = QA AND labels = automation AND status in ("IN PROGRESS", "REVIEW", "VALIDATION") ORDER BY priority DESC
Performance Test Stories - This Month	project = QA AND labels = performance AND created >= startOfMonth()
Blocked or Flaky Test Items	project = QA AND labels in (blocked, flaky) AND status != DONE
Regression Test Cases - In Progress	project = QA AND labels = regression AND status in ("IN PROGRESS", "REVIEW", "VALIDATION")
Automation Stories in CI Execution	project = QA AND status = "VALIDATION" AND labels = automation AND resolution = Unresolved
My Open QA/Automation Stories	project = QA AND assignee = currentUser() AND status not in (DONE)
High-Risk or Performance Features - Active	project = QA AND labels in (risk, performance) AND status in ("IN PROGRESS", "REVIEW", "VALIDATION")

5. Implemented Automation Rules (TBD)

Rule	Trigger	Action
DoD Reminder	Status REVIEW or VALIDATION	Comment to remind user to complete DoD checklist
Auto Blocked Transition	Label added: blocked	Move issue to BLOCKED column automatically
Flaky Pattern Alert	Label added 3+ times	Flag issue as candidate for removal or quarantine
Epic Progress Auto-Update	Story moved to DONE	Update Epic % progress bar
Auto-label Regression by Summary	Summary contains regression	Add regression label

6. Dashboard Overview (Jira Dashboard)

Dashboard Name: *Automation Engineering Dashboard*

Gadget	Purpose
Filter Results: Active Stories	Live list of automation stories in progress
Pie Chart: Automation Story Distribution	Visual breakdown by component/status
Two Dimensional Stats	Matrix: Status × Component
Blocked or Flaky Test Items	Isolate risk items
Assigned to Me	Active user-assigned tickets

Created vs Resolved	Sprint velocity view
Average Age Chart	Aging analysis for unresolved tickets

7. Governance & Team Alignment

- **Definition of Done (DoD)** in place & linked to workflow status transitions
- **Definition of Ready (DoR)** enforced on backlog/refinement intake
- CI validation tracked via VALIDATION status
- Full qTest integration planned for traceability
- Blocked stories require triage + label + automated workflow halt
- Flaky test volatility tracking built-in

8. Planned Enhancements

Initiative	Timeline
SLA & Volatility Matrix	Q2 2025
qTest-JIRA Traceability Embed	Q2 2025
Audit-Ready QA Snapshot Reports	Monthly
YAML Library Auto-Linking	Future
