

04b. QA: GitLab Standards

Page is about?

*This page defines the **official GitLab organization standards** for the AGS (Ascensus Government Savings) Automation Engineering team. It ensures **consistency, readability, scalability, and reusability** across all automation test assets being committed and merged into GitLab.*

Section 1: Branching

- Create a new branch to break up automation by stories which will also allow for quicker merges
 - Do not work directly out of main
- Use consistent naming conventions for branches to improve clarity and organization
 - Include story in branch name and short story description when possible (e.g. INFI-1234-Add-Accountfee-Schema)

Section 2: Commits

- Write clear and concise commit messages to describe the purpose of the change
 - Include subtask (scrum) in commit with description when possible (e.g. INFI-1235 – Added semantic validations for accountfee schema)
 - Kanban may not use subtasks so can use story instead
- Each commit should generally be one goal
 - Avoid committing unrelated changes in a single commit

Section 3: Merging into main

- Requires two approvals
 - 1 code review from among the following people: Nicholas Botvinnik, Sree Pallavi Ryali, Swapnil Patil, Santiago Rivas
 - 2 general/SME reviews (The code reviewer may count as 1 of the people if they have not contributed to the merge)
 - All approvals must be from someone who has no commits in the merge request
- Rebase your branch onto the latest main before merging to ensure a clean history and resolve conflicts early
 - Merging main into branch should be considered only as a secondary option to help resolve conflicts

Section 4: Other important notes

- Keep up to date with code (make sure to pull all new code from main before creating new branch)
- Avoid stale branches as keeping branches for long periods will likely mean a harder time to merge (due to conflicts)
- Regularly sync your branch with main to minimize merge conflicts
- Delete branches after merging to keep the repository clean and organized
