

Government Savings

Automation Coverage & CI Integration Assessment

Assessment Date: July 20, 2026
Rebuild validated: July 21, 2026

Executive Summary

Government Savings has meaningful automation across V3 UI (GitLab scheduled regression), legacy V2 (large Jenkins/Ant corpus), MSC Mobile APIs, metadataweb API nightly, and performance assets. A single GS-wide coverage percentage is not defensible without governed denominators. Verified platform metrics are reported separately from pending sign-off metrics.

Verified Metrics (leadership-safe)

Area	Metric	Result	As of	Evidence
Unite MSC	Mobile 2 business endpoint automation (code)	96.0%	2026-07-20T18:15:00-04:00	C:\Workspace\GitLab\api-test-automation/mobile/mobile2
Unite MSC	Mobile 1 endpoint automation (code)	22.2%	2026-07-20T18:15:00-04:00	mobile/mobile1
Unite MSC	Mobile 1 execution-verified endpoints	3.7%	2026-07-09	03-document-postman-coverage-matrix.md
Universal Platform	V3 scoped TestNG nightly share	86.9%	2026-07-01	universal-platform-coverage
Universal Platform	V3 GitLab scheduled job	100%	2026-07-20T18:15:00-04:00	prime-test-automation/.gitlab-ci.yml
Universal Platform	Metadataweb API GitLab job	100%	2026-07-20T18:15:00-04:00	api-test-automation/.gitlab-ci.yml

Pending Verification (do not quote as final)

Area	Metric	Projected	As of	Dependency
------	--------	-----------	-------	------------

CI/CD Integration

GitLab: V3 scheduled_regression_job and metadataweb Stage1 — scheduled jobs exit non-zero on failure (not verified as MR merge gates). GitHub Actions: Mobile 2 Dashboard vertical slice externally validated; workflow repository not in audit clone. Jenkins: IDP performance scheduled; V2 UI recurring job not verified. Mobile 2 GitLab nightly not created (QA-1405).

Leadership Narrative

The team has meaningful automation across Government Savings. The current limitation is not the ability to build automation; it is establishing a consistent, traceable coverage model across Jira, qTest, repositories, and CI execution.
