

# Jmeter Linux Configuration

Running jmeter on linux will exhaust the network very quickly. Configuring the below settings below will allow jmeter to max out the CPU before running into throughput issues. On a typical 4cpu box, this is around 1500 concurrent connections.

1. Open /etc/sysctl.conf and add the following lines. This will allow the settings to persist on reboot.
2. net.ipv4.ip\_local\_port\_range=1024 65000
3. net.ipv4.tcp\_tw\_recycle=1
4. net.ipv4.tcp\_tw\_recuse=1
