

Performance Test Summary

Test Types

Test	Dates	Notes	Value	Links	Features Tested
Team Mauve - Migrate WCF service to .net core Rest API	30 Jan 2024 01 Feb 2024	Team Mauve requested help in performance testing the migration of an older service to the new .net core rest API	The performance test proved that the new service was faster than the legacy WCF	• Blaze meter Summary Reports	• REST Endpoint: Validate UsernameAndPasswordCredentials • WCF for the same
Sailboat - Testing for the 200k+ new plans being entered into ARK	07 Feb 2024 21 Feb 2024 07 Mar 2024	Purchased a large book of business that added over 200k plans to ARK. We tested the Plan site to ensure the extra plans would not create performance issues Also created a nightly test in QA to keep an eye on performance	We came to the conclusion that the inflated plan count did not affect the performance of the plan website. The results were almost identical comparing our normal plan count vs the inflated plan count	• Round 1: Test Round /Cycle 1 • Round 2: Round 2 Report Example • Round 3: Round 3 Report Example, Sailboat writeup	
DCA Participant Website - Baseline testing	14 May 2024 15 May 2024	We wanted to get some baseline performance testing results for DCA participant. The goal was to test how NCache performed as well as the worst case scenario when there was no cache.	Getting us a baseline for DCA participant site. There were also some tweaks to NCache we were evaluating.	• Summary Analysis	• DCA Participant Site ◦ Login flow (normal) ◦ Dashboard load ◦ Dashboard Ajax calls
Team Aqua - Redis Change	03 Jun 2024 02 Jul 2024	Team Aqua requested help with performance testing their Redis change. A before/after test was completed	The Redis change showed a clear improvement in performance, there was an apples/apples before/after test completed that showed higher throughput and response times	• Before • After	• Heritage Ascensus Plan Site ◦ Login to Dashboard ◦ Change Plan

Ascensus Participant Site stress test	27 Jun 2024	Since there were so many participants added as part of Sailboat acquisition, we wanted to find out our ceiling for amount of logins prior to enabling access in production.	We were able to find the breaking point and go back to the team with our estimated max throughput	• Summary Analysis • Blaze meter Report	• Heritage Ascensus Participant Site ◦ Login w /M FA ◦ Dashboard Load
Team Silver - MFE Contribution	24 May 2024	Team Silver asked to help to test their manual contribution process. The concern was that there was going to be a spike in load on this service due to the sailboat acquisition.	We were able to give team silver confidence that they could handle up to 1529 manual contributions in a 30 minute period. We also identified a potential bottleneck on one of the endpoints.	• Blaze meter Report	• Heritage Ascensus Plan Site ◦ Manual Contribution Entry
DCA Participant Website - NCache improvements	31 May 2024 04 Jun 2024	Testing to see if there were any regressions from the changes to NCache	We proved that the changes resulted in a dramatic performance increase across each different testing scenario (Full cache clear, partial cache clear, no cache clear)	• Before QA Deploy • After QA Deploy	• DCA Participant Site ◦ Login flow (no mfa) ◦ Dashboard load ◦ Dashboard Ajax calls
Ascensus Participant Site Registration	21 Aug 2024	This test was created in order to tune the MaxConcurrentCalls configuration value. This value was maxed out as a bandaid fix as part of activating the sailboat plans in production	While we did discover that QA was not a satisfactory environment to test this feature, we were still able to successfully create a very complex test. We will use this test in the future in Production (Or DR) in order to tune this value properly	• Summary Analysis	• DCA Participant Site ◦ Participant MFA Registration (Phone and Email OTP) ◦ Dashboard Load

DCA Participant Website - Asset price changes	28 Aug 2024 07 Sep 2024	There was a change to the Asset price data model that could have potentially affect performance for DCA. We performed tests against QA and production using 50+ test users across several different plans.	We were able to show with clear before/after tests that the changes did not affect performance, in fact performance was improved	• QA Summary • Pro Summary	• DCA Participant Site ◦ Login flow (normal) ◦ Dashboard load ◦ Dashboard Ajax calls
DCA Participant Site	Performance Testing in Test Environment (Team Coordination) - Quality Engineering - Ascensus - Confluence	Baseline Testing	▪ Have the baseline ready for future enhancements	• Project Tests (blazemeter.com)	• DCA Participant Site: ◦ Balance Dashboard PP T With 1 plan ◦ Dashboard login PP T with 1 plan ◦ login ppt with multiple plans ◦ Plan Information ◦ PP T Balances ◦ SS O Contribution Summary ◦ SS O Deferral Rate Change
