

Performance Testing - Setup, Access & Usage

1. Installation
 - a. Jmeter - <https://www.simplilearn.com/tutorials/jmeter-tutorial/jmeter-installation>
 - i. Install plugin manager: <https://jmeter-plugins.org/wiki/PluginsManager/>
 1. Install plugins
 - a. Custom JMeter Functions
 - b. Parallel Controller & Sampler
 - b. Taurus - <https://gettaurus.org/docs/JMeter/>
 - c. Kubernetes (kubectl) - <https://kubernetes.io/docs/tasks/tools/install-kubectl-windows/>
 - i. Place the kubectl.exe wherever you like but make sure to add its folder to the PATH environment variable
2. Access
 - a. Rancher/Kubernetes - Freshservice ticket (Home > Request New Service > Technology Infrastructure > Security Group Account Request)
 - i. Request access to rancher stage (<https://gwtsrancher1.int.acs529.com>) with the ability to deploy to the ags-qa namespace on the core-wtn-dev cluster. Access should mirror Nicholas Botvinnik.
 - ii. Login: <https://gwtsrancher1.int.acs529.com/dashboard/auth/login>
 - b. New Relic - Email rimma.guberman@ascensus.com
 - i. Login: <https://login.newrelic.com/login>
3. Setup
 - a. kubectl (local)
 - i. Log into Rancher and download the KubeConfig file for core-wtn-stage
 1. 
 - ii. In order to use the namespace by default, rename the file to "config" and place into: C:\Users\<user>\.kube
4. Usage
 - a. Check kubernetes usage: `kubectl top pods -n ags-qa`
 - b. Additional details can be found here: [2024 Q3-Q4 Performance Testing Notes](#)
