

5:BlazeMeter Baseline Reports

Purpose

To track and present baseline performance test results for IDP Login and related flows. This page provides leadership a **single view** of execution history, SLA compliance, and trends.

Baseline Results Table

Date	Test Name / Flow	Users (VU)	Duration	Ramp	Avg Response (ms)	90% Response (ms)	Throughput (hits/s)	Error %	SLA Pass /Fail	BlazeMeter Report Link	Notes
09/19 /2025	IDP Test – Member Login	25	57m	30s	404	1142	50.08	0.06%	Pass	Report Link	Assertions passed, low error rate
	(fill in)										
	(fill in)										
	(fill in)										

Guidelines for Updating

1. **After every run** (Jenkins BlazeMeter):
 - Record date/time.
 - Note the flow tested (e.g., idp - login, auth - server, up - get - metadata).
 - Log concurrency (VU), duration, ramp.
 - Capture SLA metrics (avg response, 90% response, throughput, error %).
 - Mark SLA result as Pass / Fail (based on Child Page 1 criteria).
 - Add BlazeMeter report link.
 - Add notes (any assertion failures, DB deadlocks, infra issues).
2. **Highlight Failures in Red**
 - Example: Fail for SLA breaches.
3. **Trend Analysis**
 - Leadership can see improvements or regressions across runs.
 - Weekly summaries can be extracted from this table for QA Connect updates.

Next Steps

- Migrate historical BlazeMeter reports (last 3–4 baseline runs) into this table.
- Add future runs daily/weekly depending on cadence.
- Use this page to drive **SLA compliance visibility** in QA Connect meetings.
