

00. QA Automation - Master Onboarding Guide

Page is about?

Page Purpose

*This master onboarding page is the single entry point for **new SDETs/Automation Engineer** joining the Ascensus QA team. It provides:*

- *A **step-by-step onboarding roadmap***
- *Links to setup guides, tools, training, and best practices*
- *Connection to team, tech stack, and active automation frameworks*
- *Structured escalation, support, and community integration*

Onboarding Timeline Overview

Phase	Timeframe	Focus Areas
Week 1	Day 1–5	HR tasks, tool access, workspace setup
Week 2	Day 6–10	Repo access, local setup, KT sessions
Week 3+	Ongoing	First test execution, defect tracking, CI integration

Access & Tooling Setup

Tools You Will Use

Tool	Purpose	Setup Link / Notes
GitLab	Source control for test repos	Ask for repo access via IT Ops
IntelliJ/Eclipse	Code editor	VS Enterprise also supported for C# automation
Jenkins	CI/CD execution & pipeline visibility	Part of QA CI workflows
BlazeMeter	Cloud test execution (Perf Testing)	Ask QA Admin to assign seat
JIRA	Test tracking, epic/story access	Confirm Epic and Story access
Postman	API testing & pre-automation validation	Local + Newman setup
New Relic	Observability and SLA monitoring	Email Rimma for dashboard access
Rancher	K8s Cluster / AGS-QA namespace access	Submit FreshService request
TrakIT	Time logging and project tracking	Internal only (use Edge)

Local Environment Setup

These will be covered in Page 06: Tool Access & Setup in detail, but here's the quick checklist.

- Install **Java 11+**
- Set up **Taurus & bzt**
- Configure **JMeter** locally (optional dry runs)
- Clone GitLab repo and run bzt: sample YAML
- Set up IDE: IntelliJ / Eclipse / VS Code
- Validate test environment: access DB, API endpoints, URLs

Knowledge Transfer (KT) Plan

Refer to Page 10: KT Planner + Video Links for full details

- [Local Environment Setup – KT Video](#)
- [Your First Test – KT Video](#)

- [K8s & Helm Walkthrough](#)
- [Perf Test Framework by Alex & Nick](#)

Repositories & Frameworks

Area	Git Repo / Documentation Link
Prime Automation	prime-test-automation/prime
Universal Perf Tests	performance-universal , YAML-based, GitLab
UI + API Frameworks	Shared in QA onboarding confluence + qTest setup
Test Execution Reports	reports/ folder per module or stored in Confluence

Team Integration

What	Action / Owner
Meet the QA team	Join standups, collabs, KT sessions
Join MS Teams channels	e.g., #automation-squad , #TeamOrange
Added to Calendar Events	Scrum, Planning, Refinement, Retro
Confluence Setup & Pages	Bookmark shared QA Confluence hub

First Sprint Objectives

These are the first things you will begin contributing to post-setup:

1. Execute 1–2 regression or smoke test suites (under supervision)
2. Start working on JIRA tickets assigned to onboarding Epic
3. Shadow senior SDETs during CI pipeline maintenance
4. Raise & triage first set of bugs
5. Push and validate your first automated test case in GitLab
