

1. How to Request PuTTY/Linux Access for Stage 1 (QA Automation)

Overview

QA Automation team members require Linux (PuTTY) access to **Stage 1 DB** for creating, updating, and maintaining automation regression test cases and suites.

All requests must be submitted through **Fresh Service** at: [Linux User Account Creation – Fresh Service Catalog](#)

Step-by-Step Instructions

1. Open Fresh Service Form

Navigate to the [Linux User Account Creation](#) form.

2. Fill Out Form Fields

Field	Value / Instruction
Start Date	Current date or required access start date
Does the user have a Linux account already?	New User (if first time) or Existing User
User Type	Offshore/Onsite etc
Linux Groups – Offshore	satellite(8000)
RSD username of a team member using Linux	{Your Username}
Full Name	Your full legal name
Email	Your Ascensus email
Job Role/Team	your respective role (like SDET/Automation Squad)
RSD username of a team member	swpatil (for mirroring)
Server Name/Grouping	• gwtppsshrelay01 (primary) • sshrelaywt1, • frogger (aliases) QA Automation – Stage 1 DB Access
Is this a Temporary Production Access request?	No
Business Justification	Use the justification provided below

3. Business Justification (Copy & Paste)

Requesting Linux account access to gwtppsshrelay01 server (aliases: sshrelaywt1, frogger) for QA Automation team.

This access is required to connect via PuTTY tunnel to Stage 1 DB, where the regression suite executes. As SDET, I need this access to create, update, and maintain automation test cases and suites, ensuring proper execution and support of regression runs.

Mirror: Swapnil Patil.

Does the user have a Linux account already ? *

New User

User Type

Offshore

Linux Groups - Offshore *

satellite(8000)

RSD username of a team member using Linux *

{Your Username}

Full Name

{Your full name}

Email

{Your Email add}

Job Role/Team

Your role/Your Team

RSD username of a team member
