

2. How to Request Oracle Database Access & Configure Oracle Client (Stage 1 – QA Automation)

Overview

QA Automation team members require **Oracle Database (Stage 1)** access to validate test data and support automation regression suites.

Access is requested via **Fresh Service**, and connectivity is established using the **Oracle Client**.

[Oracle Database Access – Fresh Service Catalog](#)

Step 1: Raise Oracle Database Access Request

1. Open Fresh Service Form

Navigate to the [Oracle Database Access](#) form.

2. Fill Out Form Fields

Field	Value / Instruction
Application Level Account (If applicable)	Leave blank (unless a specific app account is required).
Action Needed	Add
Mirror Access After	Swapnil Patil (swpnil.patil@ascensus.com)
System Environment Needed	Stage 1
Oracle Databases Needed	UIIS01 (SID: UIIS01)
Other Databases Not Listed	Leave blank unless needed.
Role Required	IRADEVELOPER
Other Access Not Listed	Leave blank unless needed.
Business Justification	Use the justification provided below.

3. Business Justification (Copy & Paste)

Requesting Oracle Database access for Stage 1 environment to support QA Automation activities.

- Purpose: Data validation and regression testing for automation test cases
- Port: 41521
- SID: UIIS01
- Username: [Your AD ID]
- Mirror Access: Swapnil Patil

This access is critical for creating, updating, and validating test data required for automation regression suites. It ensures test coverage, consistency, and reliable execution of QA Automation in Stage 1.

Step 2: Install Oracle Client

If searching in Google, use the keywords “**Oracle Full Client**”.
You will need an Oracle account to download — use a **personal email** for faster verification.

Option 1 – Download from Oracle Website (Optional)

1. Download **Oracle Database 19c Client (19.3) for Microsoft Windows x64 (64-bit)**:
[Oracle 19c Client Download Page](#)
2. Extract files (if zipped).
3. Run **setup.exe**.
4. Choose **Administrator installation**.
5. Accept default settings if no other Oracle product is installed.

Option 2 – Use Internal L Drive Copy (Recommended)

1. Copy file from: L:\Departments\Financial Services\UII\UII\Software\Oracle_11Gr2_x64_client\win64_11gR2_client.zip
2. Extract to local folder (e.g., C:\temp).
3. Run **setup.exe**.
4. Install Oracle Client with **Administration module**.

Alternative (Older Version)

You may also use: L:\Departments\Financial Services\UII\UII\Software\Oracle_11Gr2_x64_client

Step 3: Configure Oracle Client

- If tnsnames.ora is missing, copy it manually.

From: L:\Departments\Financial Services\UII\UII\UII-B0DEV\Swapnil

To: C:\app\{UserName}\product\11.2.0\client_1\network\admin
