

03a. GitLab: Setup & Project Cloning

Page is about?

Purpose: This guide explains how to properly access, configure, and clone GitLab repositories for automation testing projects at Ascensus. Covers GitLab account setup, SSH key registration, SourceTree/CLI/Eclipse/IntelliJ integration, and troubleshooting access issues.

1. GitLab Access Checklist - [View Troubleshooting Doc](#)

Before proceeding, ensure the following is **complete**:

Step	Task	Status
1	Request membership to Git lab_Users via FreshService	Required
2	Wait for approval email (supervisor approval needed)	Required
3	Login via SSO: GitLab SSO Login	Once Access Granted
4	Setup Two-Factor Authentication (2FA) on GitLab profile	Required
5	Setup SSH Key (see below) and add to GitLab SSH Settings	Required
6	Install SSL Certificates (Ascensus CA) %UserProfile%\ca-bundle.crt	Required

2. Configure Git Environment (Windows/Mac)

```
# Windows
git config --global user.name "First Last"
git config --global user.email "first.last@ascensus.com"
git config --global ssl.cainfo "%UserProfile%\ca-bundle.crt"

# Mac/Linux
git config --global user.name "First Last"
git config --global user.email "first.last@ascensus.com"
git config --global ssl.cainfo "$HOME/ca-bundle.crt"
```

Verify Setup:

```
git config --list
```

3. Generate and Register SSH Key

```
ssh-keygen -t rsa -b 4096 -C "your.email@ascensus.com"
```

Save key in:

```
Windows: C:\Users\<your-username>\.ssh\
Linux/Mac: ~/.ssh/
```

Then paste your **public key** (id_rsa.pub) in GitLab: [GitLab SSH Settings](#)

Update SSH Config:

```
Host gitlab.com
  User git
  IdentityFile ~/.ssh/id_rsa
```

Test:

```
ssh -T git@gitlab.com
```

4. Clone Repository – Options

Recommended Destination Path: C:\Workspace\Gitlab\Automation

Option A: Using Git CLI

```
git clone git@gitlab.com:ascensus-gs/products/depot/automation.git C:\Workspace\Gitlab\Automation
```

Option B: Using SourceTree (GUI)

1. Download [SourceTree](#)
2. Launch **Clone Repository**
3. Source URL: [git@gitlab.com](#):ascensus-gs/products/depot/automation.git
4. Destination Path: C:\Workspace\Gitlab\Automation
5. Set Remote SSH
6. Done

Option C: Using Eclipse

1. Install Eclipse with **EGit plugin**
2. File Import Git Clone URI
3. URI: [git@gitlab.com](#):ascensus-gs/products/depot/automation.git
4. Auth Type: SSH
5. Select master or other required branches
6. Set local directory C:\Workspace\Gitlab\Automation
7. Click Finish

Option D: Using IntelliJ IDEA

1. File New Project from Version Control Git
2. Repository URL: [git@gitlab.com](#):ascensus-gs/products/depot/automation.git
3. Directory: C:\Workspace\Gitlab\Automation
4. Set Auth Type: SSH (match local key)
5. Clone

5. Common GitLab Troubleshooting

Issue	Fix
404 / Access Denied	Wait for membership approval in Gitlab_Users
"Hardstopped by Analyze Engine"	Use SSO Login only; do NOT use public GitLab login
SSH Error: "Host key verification failed"	Ensure SSH key is registered and added to agent
SSO Login redirects or errors	Reset session & login from SSO Link
Can't see any projects	Request to be added to correct team/project group
