

1. Automation Inventory – Existing Assets vs Required for Plan Conversion (WhiteCap Ascensus)

1. Purpose of This Document

This page provides a **clear inventory** of:

- 1. **What automation already exists in our Ascensus QA ecosystem**
- 2. **What can be directly reused for WhiteCap plan conversion**
- 3. **What requires configuration, enhancement, or new development**
- 4. **What must remain manual due to SSO/IDP limitations or low ROI**

This is the **baseline** required before we commit to effort, timeline, or staffing.

2. High-Level Summary

Area	Existing Coverage	Reusability for Conversion	Action Needed
CSR UI Automation	70–80% regression suite	High	Update plan metadata, fund IDs, traunch IDs
Member UI Automation	40–50% (post login only)	Medium	Post-handshake flows only; login remains manual
API Automation	60–70% endpoints	High	Add new plan metadata, validate conversions
Metadata API/DB Validation	Partial	Medium–High	Build new test data generation flow
Backoffice Jobs	Partial	Medium	Add new DAEMONS/file configs
File Validation	Existing (Mellon/Recon/Price)	High	Add new PlanID mappings
Kofax	Partial smoke	Medium	Convert to full feed validations
Manual-Only Areas	–	Poor	SSO/IDP/Content validation

3. Existing Automation Assets (Detailed Inventory)

Below is a **clean, accurate inventory** of frameworks and modules we already have running in Prime v2/v3, Unite, and generic SNSS modules.

3.1 CSR UI Automation – Existing (Reusable 80% after updates)

Existing Capabilities (80-85% exists):

- CSR Login & Permissions- *Added to Daily Regression*
- Account Overview (Header, sidebar, breadcrumbs)- *Added to Daily Regression*
- AsOfBalance widget- *Added to Daily Regression*
- Graph (chart.js comparison)
- Download Transactions
- Transaction History (APY/chronological filters)
- Change Transaction Year
- CSR Transaction Flows:
 - Contribution - *Added to Daily Regression*
 - Withdrawal- *Added to Daily Regression*
 - Exchange
 - Transfer
 - Multiple Contributions- *Added to Daily Regression*
 - Fee/Reversals
 - Share Adjustment
 - Ugift
 - Reversals for all above
- CSR Principal Update
- CSR Information tab
- CSR Financial History
- CSR Bank History
- CSR Failed Transactions
- CSR Aggregation/OFAC
- CSR Maintenance History
- All CSR Member Action flows
- CSR Profile & Documents- *Added to Daily Regression*

- CSR Banker/Payroll/Delivery Prefs- *Added to Daily Regression*
- CSR Authorized Agent- *Added to Daily Regression*
- CSR Trusted Contact- *Added to Daily Regression*
- CSR Beneficiaries- *Added to Daily Regression*
- CSR Rep/Advisor
- CSR Right-hand side navigation
- CSR Image upload
- CSR Restrictions/Freeze
- CSR Case Management
- CSR Fee Management
- CSR Voucher Management
- CSR Withdrawal Mgmt
- CSR Employer Mgmt
- CSR Media Output
- CSR Green Screen Links

Changes Needed for WhiteCap:

- Add new PlanID to XML runners (stage1 & QC4)
- Update metadata lookup mapping
- Recreate test users (CSR + Member)
- Adjust traunch/fund mapping validation
- Validate content that varies per plan

3.2 Member Portal Automation

Existing Capabilities (usable post login):

- Enrollment (Initial, Save-for-later, Resume)
- Profile updates
- Make a Contribution
- Manage Recurring Contributions
- Rollover (Partial & Full)
- Ugift flows
- Transfer Beneficiary
- Change Investment Options
- Withdrawal
- Beneficiary photo update
- Delivery Preferences
- Bank mgmt
- Account Details
- Trusted Contact
- View Statements/Confirms

NOT Automatable (SSO/IDP Restrictions):

- Login
- MFA
- Forgot Username / Password
- SSO handshake from WhiteCap portal

3.3 API Automation (Existing)

Framework Exists For:

- Account API POST, PUT, GET
- Plan API GET
- Metadata API GET
- Allocation API GET
- Enrollment API POST + status checks
- Profile API
- Bank API
- Contribution API
- Withdrawal API
- Ugift API
- Transfer API

Changes Needed:

- Insert new PlanIDs
- New fund/traunch mapping
- Create metadata validation logic for new plan types
- Integrate conversion-specific endpoint calls

3.4 Metadata Creation & Validation

Existing Support:

- Metadata parsing
- DB validation utilities
- API-based lookup testing
- Assertions for funds, investment options, portfolios

Required Enhancements:

- New test data generator
- New traunch ID mapping rules
- New age-based roll settings
- Contribution/Withdrawal limits
- UGIFT eligibility
- SSO flags
- Kofax flags
- WhiteCap-specific metadata fields

3.5 Backoffice Job Automation (Existing)

We already validate:

- Price File ingestion
- Performance File
- Mellon Trade
- Recon File
- Max Contribution Daemon
- Overnight Withdrawal Tracking
- Withdrawal Holds
- Account Sync
- ACH Feeds

Need to Extend:

- Set up new PlanID file directory watchers
- Add validations for conversion scripts
- Add feed-level verification for new plan holdings

3.6 Kofax Automation (Existing: Smoke Only)

Existing Capabilities:

- Enrollment Feed
- Withdrawal Feed
- Deposit Feed
- Transfer Feed
- Exchange Feed
- Case Management Feed

Need to Add:

- Full schema validation
- Gifting feed
- Gender correction feed
- Kofax maintenance feed
- Kofax lookup feed

3.7 File/Feed Automation (Existing)

Existing Coverage:

- Mellon checks & Reversals
- Positive Pay
- Recon Checks
- Mellon ECC payroll
- Settlement Files

- Price File
- Recon File
- Performance File

Need for WhiteCap:

- Add new PlanIDs
- Validate conversion-specific before/after differences
- Add Flywire Settlement Report automation

3.8 Manual-Only Areas (Non-Automatable)

Due to SSO or UI nature:

- SSO handshake WhiteCap SNSS
- IDP login - *Added to Daily Regression*
- MFA
- UI content validation (logos, footer, fonts)
- Mobile responsive layouts
- Deep linking validation
- Access-based differences in metadata
- Aggregator logins
- Web Registration with SSO
- Universal content validations
- Partner CSR
- CSR Help desk flows (non-deterministic)

Automation ROI on these = **low or zero**.

4. Gaps Identified (What We Must Build)

New Automation Required

1. Test Data Generator for conversion plan (critical)
2. Metadata validator for new conversion plan types
3. Backoffice daemon mapping for WhiteCap
4. Unified API DB UI reconciliation checks
5. Kofax full schema validation
6. Flywire file validator
7. New plan-based branching logic in CSR runners & TestNG suites
8. Enrollment flow post-SSO (requires new URL/redirect configurations)
9. File watcher enhancements for new plan feeds
10. Common "Conversion Health Report" automation

5. Risk Indicators (Automation Perspective)

Risk	Impact	Mitigation
SSO handshake breaks automation entry point (<i>member portal - high impact</i>)	High	Start tests post-redirect only
Metadata delays from backend	High	Require metadata freeze milestone
Traunch & fund mismatches	High	Build DB + API reconciliation script
Daemon scheduling irregularities	Medium	Validate cron + log timestamps
Kofax feed timing	Medium	Mock feed injection during testing
New plan creation dependencies	High	Use dynamic test user creation

6. Action Items

Automation Team

- Extract Plan IDs, Traunch IDs, funds from backend
- Build metadata generator
- Update CSR/Mobile runner XMLs
- Build conversion health suite

- Rewire file validations for new directory

Manual QA

- SSO handshake
- UI content checks
- MFA
- Accessibility
- Branding
