

IDP Production Release – Technical & Audit Reference

Purpose:
This page serves as the technical reference, audit record, and troubleshooting guide for the IDP Production Release.
It is NOT intended for live execution.
All live actions must reference the Parent Page.

1. Scope of This Reference

This document contains:

- Standardized production test data rules
- IDP plan master list
- Read-only verification SQLs
- Sardine / Fraud handling procedures
- MFA exception handling (DBA only)
- Repository references
- Post-release cleanup guidance

2. Standard Production Test Data Rules

2.1 Account Holder (AO)

Field	Value
First Name	QAPROD
Last Name	QATest
Full Name	QAPROD QATest

2.2 Beneficiary (Bene)

Field	Value
First Name	QABene
Last Name	QATest
Full Name	QABene QATest

2.3 Credentials & Contact Information

Item	Rule
Username	idp_<planCode>_<tester>
Email	Tester-owned (used for MFA)
Phone	Tester-owned (used for MFA)
Password	Existing plan-compliant standard

Important Rules

- Username uniqueness **not required** across plans
- Email & phone **must be owned by tester**
- Accounts are plan-isolated

2.4 SSN Rules (Critical)

- Randomly generated per account
- Valid SSN format only
- No reuse across accounts
- Generator logic intentionally excluded from documentation
- SSNs must never be hardcoded or logged

3. IDP Plan Master List (Stage 1)

3.1 IDP Direct Plans (21)

```
AKD, AKN, ARD, DCD, IAD, IDD, ILD, IND, KYD,  
MDD, MOD, NDD, NJD, NMD, NVU, NYD, OHD,  
PAD, PAG, TND, WAD
```

3.2 IDP Entity Plans (18)

```
AKB, CTB, DCB, DEB, IAB, ILB, INB, MIB, MNB,  
MSB, MTB, NCB, NEB, NHB, NJB, NVB, NYB, TNB
```

4. Production Verification SQLs (READ-ONLY)

4.1 Verify IDP-Enabled Plans (Oracle)

```
SELECT DISTINCT TT.BRANDING, TT.VOUCHER_PREFIX  
FROM TU_TRAUNCH_METADATA TM  
JOIN TU_TRAUNCH TT ON TM.TRAUNCH_ID = TT.TRAUNCH_ID  
WHERE TM.ATTRIBUTE_KEY = 'IDP_WEB_ENABLED'  
      AND TM.ATTRIBUTE_VALUE = 'true'  
ORDER BY 1;
```

Usage

- Read-only verification
- Confirms which plans are IDP-enabled in production
- QA is permitted to execute

5. Sardine / Fraud Account Freeze Handling

5.1 Identify Sardine Account Freeze (Oracle – Read-Only)

```
SELECT m.WEB_ACCESS,  
       ac.*  
FROM TU_MEMBER m  
JOIN TU_ACCT a ON m.UII_MEMBER_ID = a.UII_MEMBER_ID  
JOIN TU_ACCT_CONSTRAINT ac ON ac.SEQ_ACCT_ID = a.SEQ_ACCT_ID  
WHERE ac.note = 'Sardine Account Freeze'  
      AND m.WEB_ACCESS = 'D'  
      AND a.UII_ACCT_ID = '<ACCOUNT_ID>';
```

Indicators

- WEB_ACCESS = 'D'
- Constraint note = Sardine Account Freeze

5.2 Sardine Resolution Process (Controlled)

1. Tester confirms freeze using read-only query
2. Tester logs details in Parent Page tracking table
3. Sardine team reviews account legitimacy
4. Sardine team prepares SQL
5. DBA reviews and executes SQL
6. Tester re-verifies access
7. Status updated to CLEARED

Restrictions

- QA never executes SQL
- QA never bypasses fraud controls

- All actions must be logged

6. MFA Exception Handling (SQL Server – DBA ONLY)

Used only when MFA blocks critical validation and is explicitly approved

```
UPDATE person.Profile
SET TwoFactorEnabled = 0
WHERE ProfileId IN (
    SELECT ProfileId
    FROM person.Credential
    WHERE UPPER(UserName) LIKE 'QAAUTOTEST%'
);
```

Mandatory Conditions

- QA Lead approval
- Director approval
- DBA execution only
- Full audit trail required
- MFA must be re-enabled post-testing if required

7. Repository Reference Index

Feature Files

- UniversalEnrollmentPositive.feature
- IDPLogin.feature
- IDPLoginSmoke.feature

Step Definitions

- UniversalEnrollmentStepDefs.java
- IDPLoginStepDefs.java
- IDPMFALoginStepDefs.java
- PixelTrackingStepDefs.java

Test Data

- UniversalEnrollmentPositive.csv
- IDPLogin.csv

SQL Assets

- idplogin.sql

8. Post-Release Account Cleanup

Ownership

- Cleanup Owner: **TBD**
- Assigned after release sign-off

Rules

- No deletion without compliance approval
- Accounts may be required for audit or validation
- Cleanup actions must be auditable

Tracking

Cleanup must include:

- Account identifier
- Cleanup method

- Approval reference
- Execution timestamp

9. Document Control

Item	Value
Document Version	1.0
Owner	QA Lead – TBD
Approver	Director – Rajib Akhtar
Last Updated	To be filled
Review Cycle	Per release
