

05. Resume Review & Screening Guide – Sr. SDET / Sr. Automation Engineer

 Page is about?

Purpose: Enable hiring panelists, recruiters, or leads to quickly **screen resumes** with a consistent approach. Ensure alignment with our **technical stack, team culture, and delivery maturity**.

What to Look For (Positive Indicators)

Indicator	Why It Matters
Built automation frameworks	Shows ownership and deep understanding
Experience with Selenium + Java	Matches our tech stack
Used BDD with Cucumber/TestNG	Critical for aligned test reporting & Gherkin usage
API Testing (Postman + RestAssured)	Backend validation is a must
Oracle/SQL exposure	Required for DB validation
Worked on CI/CD pipelines	Aligns with our DevOps-integrated QA approach
Worked in Agile/Scrum setup	Must be able to collaborate and iterate
Contributed to cross-functional teams	Communication and maturity marker
Mentioned tools like Jenkins, Git, JIRA	Tools we use across teams

Red Flags Checklist (Things to Watch Closely)

Red Flag	Why It Matters
Mentions only tool usage, not design	Indicates shallow experience
Doesn't mention any backend testing	Suggests UI-only tester
Inflated title without team-leading skills	May not align with actual seniority
5+ years experience, but no framework ownership	Potential overstatement
No Git / CI-CD / version control	Huge gap in delivery capability
Long gaps without explanation	Risk without clarity
Buzzword-heavy resume with little detail	Signals keyword stuffing
No API, no DB, no CI—only Selenium	Not fit for full-stack automation role

Sample Resume Review Scoring Sheet

Skill / Area	Score (1–5)	Comment
Java & OOP Concepts		
Selenium WebDriver		
Automation Framework Ownership		
API Testing (Postman / RestAssured)		
SQL / Oracle		
CI/CD – Jenkins, Git		

Agile / Scrum		
Test Strategy / Ownership		
Communication / Clarity of Resume		
Overall Fit for Role		

Decision Threshold:

Total Score 35 = Move to Tech Round

Score < 30 = Reconsider or keep in bench pool

Tips for Resume Review

- Limit initial screen to 5–7 minutes
- Use **search terms**: “framework”, “RestAssured”, “TestNG”, “Git”, “CI”, “SQL”
- Prefer candidates who **quantify** impact (e.g., “reduced regression time by 40%”)
- Flag resumes with **more than 3 job hops in 5 years** for deeper inquiry
- Validate if resume **matches the role**: Sr. SDET Manual QA with Selenium script usage
