

8. Sardine Regression – Automation Regression Suite (Prime Version 2)

Purpose / Overview

The **Sardine Regression Suite** is designed to validate the **integration of NextGen, ABLE, Prefill, and CSR Distribution workflows** executed as part of the **Stage1 nightly regression pipeline** under **Prime Version 2**.

This suite focuses on **cross-custodian validations** triggered via the **Sardine feed**, ensuring data consistency and functional integrity across multiple plan types and custodians including **CAD, TNB, PAB, PAG, PAD, VGI, NYD, and MID**.

Suite Information

Attribute	Details
Owner	QA Automation Team
Environment	Stage 1
Suite Name	Stage1 Sardine Regression Suite
Suite File Path	/qa-automation/unite/bin/regression/daily/stage1-sardine-regression.xml
Framework Version	Prime Version 2
Execution Frequency	Daily @ 12:00 AM EST
Framework Tools	TestNG + Cucumber + Selenium
Runner Type	ParallelFeatureRunner / FeatureRunner (Hybrid)
Thread Count	1
Tags Used	@regression, @sardinerun, @dailyrun-naa
Jenkins Job	STAGE1-Daily-Unite-Prime-Regression
Reports	TestNG HTML Reports
qTest Dashboard	Stage1 Sardine Regression – Dashboard

Execution Summary

Metric	Count / Status
Total Tests	10
Methods Executed	29
Passed	18
Failed	11
Feature Files	6
Execution Duration	~3.5 hours
Plans Covered	CAD, TNB, PAB, PAG, PAD, VGI, NYD, MID
Suite Type	Cross-Custodian Regression Validation

Module & Plan Coverage

Plan / Custodian	Module	Feature File	Functional Area	Tags
CAD	Member Enrollment	T100_NextGenEnrollmentPositive.feature	NextGen Positive	@regression, @sardinerun

CAD	Multiple Beneficiaries	T101_NextGenEnrollmentMultipleBeneficiary.feature	Multi-Beneficiary	@regression,@dailyrun
TNB	NAA ABE Enrollment	T100_NAA_EnrollmentPositive.feature	ABLE Positive (NAA)	@regression,@dailyrun-naa,@sardinerun
PAB	NAA ABE Enrollment	T100_NAA_EnrollmentPositive.feature	ABLE Positive (NAA)	@regression,@dailyrun-naa,@sardinerun
PAG (GSP)	Enrollment	T100_GSPEnrollmentPositive.feature	529 GSP Enrollment	@regression,@sardinerun
WFD / PAD / VGI	CSR Prefill Enrollment	PrefillEnrollmentPositive.feature	Prefill – UGMA, UTMA, Individual	@regression,@sardinerun
NYD / MID	CSR Distribution	QandNQDistribution.feature	Qualified/Non-Qualified Withdrawals	@regression,@sardinerun

Scenario Breakdown (Chronological Order)

#	Scenario Name	Feature File	Plan
1	NextGen Enrollment with Full enrollment options for CAD UGMA with AIP	T100_NextGenEnrollmentPositive.feature	CAD
2	NextGen Enrollment with Full enrollment options for CAD Individual with AIP	T100_NextGenEnrollmentPositive.feature	CAD
3	NextGen Enrollment with CAD Employer / Non-Employer	T100_NextGenEnrollmentPositive.feature	CAD
4	NextGen Enrollment with Owner-Beneficiary	T100_NextGenEnrollmentPositive.feature	CAD
5	ABLE Enrollment (Individual, Parent, Authorized Legal, Conservator)	T100_NAA_EnrollmentPositive.feature	TNB, PAB
6	GSP Enrollment via EBT / Payroll / Check	T100_GSPEnrollmentPositive.feature	PAG
7	CSR Prefill Enrollment – UGMA/UTMA CHECK	PrefillEnrollmentPositive.feature	PAD, WFD, VGI
8	CSR Prefill Enrollment – Individual EBT	PrefillEnrollmentPositive.feature	PAD, WFD, VGI
9	CSR Distribution – Qualified to AO (Bank)	QandNQDistribution.feature	NYD, MID
10	CSR Distribution – Non-Qualified to AO (Bank)	QandNQDistribution.feature	NYD, MID

Automation Highlights

- **Unified cross-custodian validation** combining 529, ABLE, GSP, and CSR workflows.
- Validates end-to-end integration of **Sardine prefill feeds** with enrollment and distribution processes.
- Uses **Prime ParallelFeatureRunner** for high consistency and runtime efficiency.
- Comprehensive coverage for:
 - **Prefill-to-enrollment mapping**
 - **Multi-beneficiary handling**
 - **Cross-custodian fund validation**
 - **CSR-qualified/non-qualified distributions**
- All results synced automatically to **qTest** and **TestNG HTML** reports.
- Provides a **single regression snapshot** for all custodian-specific flows under Sardine.

Observations / Issues

Area	Observation / Status
CAD Enrollment	Multiple AIP and UGMA cases failing due to invalid fund mapping post-Sardine sync.
Authorized Legal Enrollment (TNB)	Intermittent DB constraint issue with ABLE custodian tables.
Distribution Flows	NYD/MID showing duplicate transaction creation for Non-Qualified bank distributions.
Prefill Flows	Stable; all PAD/WFD/VGI prefill cases passed.
Environment	Sporadic delays in CSR login for GSP and ABLE flows observed during midnight runs.

Recommendations & Next Steps

- Add **data validation hooks** to verify Sardine feed payload before test execution.
- Include **negative test coverage** for incomplete prefill and invalid mapping scenarios.
- Align **custodian-specific credentials** and segregate data pools for TNB/PAB ABLE runs.
- Implement **dynamic retry logic** for AIP enrollment failures due to external service latency.
- Integrate Sardine regression health summary in the **daily Jenkins report**.

Maintenance Guidelines

Frequency	Owner	Action
Daily	Offshore QA Team	Validate nightly Sardine execution results; report custodian failures.
Weekly	SDET Lead	Verify cross-custodian DB mappings and enrollment data sync.
Monthly	QA Manager	Review Sardine feed impact analysis and regression coverage delta.
Quarterly	QA Architect	Refactor shared feature files; add unified Sardine regression dashboard in Confluence.
