

Automation Regression Suite – Daily Validation Guide

Purpose

Every night, the Unite Automation Regression Suite runs at **1:00 AM EST** (Monday to Friday). By the next morning, the offshore QA team must validate results, identify failures, and escalate bugs. This page provides a **step-by-step guide** for daily validation.

Frequency: Daily (Monday–Friday, 7:30 AM EST / 5:00 PM IST)

Owner: QA Automation Team

Environment: Stage 1

Daily Validation Steps

1. Check QTest Report

- Go to **QTest Portal**: [QTest Execution Report](#)
- Locate the **Unite Regression Run** for today's date.
- Confirm if the suite is **PASS / FAIL**.

2. Check TestNG Report (Detailed Results)

- Open: [TestNG Reports – Unite](#)
- Select the folder for **today's run date** (e.g., 20250919).
- Navigate into **each module** (screenshot attached).

Example Modules:

- *stage1-acct-overview*
- *stage1-contributions*
- *stage1-enrollments*
- *stage1-web-login*
- *stage1-web-registration*
- *stage1-withdrawals*

3. Validate Test Case Failures

- If a module has failures:
 1. Open the **failed test case**.
 2. Review:
 - **Exception Log**
 - **Report Output**
 - **Snapshot / Screenshot**
 3. Try **running locally** to confirm.

Failure Classification

Failure Type	What It Means	Action
Flaky / False Alert	Login timeout, page not loading, stale element errors not reproducible locally.	Ignore, mark as flaky. No bug needed . But eventually we will add this to backlog & will fix it per the priority
Automation Sync Issue	UI changed (element locator missing) but test not updated.	Report as Automation Bug Follow Bug Handling process by raising a bug to CL & TLs
Functional Bug	Application issue (e.g., "Please try again later", validation error, backend service failure).	Report as Application Bug immediately Follow Bug Handling process by raising a bug to CL & TLs
Environment Issue	Test blocked due to infra (DB down, server not responding).	Report to DevOps / Infra Team . Report as Automation Bug Follow Bug Handling process by raising a bug to CL & TLs

Reporting

- All issues must be **reported to Swapnil Patil** before EOD IST.
- Swapnil will create JIRA tickets and assign them to the correct team.

Daily Checklist for Offshore Team

Step	Action	Status (I)
1	Check QTest report for today's run	
2	Open TestNG report and navigate into today's run folder	
3	Review each module report (overview, contributions, enrollments, login, registration, withdrawals, etc.)	
4	Validate failures check Exception, Report Output, Snapshot	
5	Run failed test locally to confirm issue	
6	Classify issue Flaky / Automation Sync / Functional Bug / Env Issue	
7	Summarize findings and report to Swapnil	

Action Item

Offshore team: Please **complete this checklist daily**, **validate at 7:30 AM EST** and **report summary to Swapnil** regardless of pass or fail.
