

Government Savings

Automation Coverage — Technical Assessment

Prepared by: Swapnil Patil
QA Automation & Quality Program Lead, Government Savings

Assessment Date: July 21, 2026

Version: 1.0

Classification: Confidential — Internal Use

Technical Assessment Live Validation

Government Savings — Technical Assessment (Live Validation)

Validation timestamp: 2026-07-20T18:15:00-04:00

Primary repositories: `api-test-automation` @ `cee0de9`, `prime-test-automation` @ `93f8628`

Live CI APIs: GitLab token **expired (401)** — YAML + local repo are primary evidence

A. Technical assessment summary

Mobile 2 — reconciled current result

| Metric layer | Numerator | Denominator | Result | Evidence |

|-----|-----:|-----:|-----:|-----|

| **Implemented automation (code)** | **24** | **25** | **96.0%** | All business endpoints except `mobilemembers` have canonical L3+ tests on `main` @ `cee0de9` |

| **Automatable scope (excl. mobilemembers from denominator)** | **24** | **24** | **100%** | Same code; alternate denominator presentation |

| **Last execution-verified (sign-off)** | **22** | **25** | **88.0%** | `7ccaf46` @ 2026-07-14 — **stale for implementation** |

| **Scheduled CI integration** | **0** | **1** job | **0%** | No Mobile 2 job in `api-test-automation/.gitlab-ci.yml` |

Denominator source: Dinesh `API Endpoints - Mobile2.xlsx` — **25** documented business endpoints (excludes health/docs).

Intentional exclusions from business automation numerator:

- `GET /mobile2api/v1/mobilemembers/{planId}/{username}` — acceptance harness; smoke-only (`MobileMembersRequestTest`)

Not uncovered — intentional suite placement:

- `PUT`/`DELETE` `/mobile2api/v1/mobilebanks` — automated; **smoke/targeted only** (`mobile2-smoke-testng.xml`)

- `DELETE` `/mobile2api/v1/mobilecontribution/{ext}/{id}` — automated; **module/targeted only**; excluded from master

Post-7ccaf46 implementation deltas (code, execution refresh pending):

- `GET /mobile2api/v1/mobileytdsummary/{ext}` — `MobileYtdSummaryRequestTest` — ****in master regression****

- `GET /mobile2api/v1/mobilebanks/{id}` — `getMobileBankById\_returnsBank` — ****in module + master class load****

****Full endpoint inventory:**** `01-inventory/mobile2-endpoint-current-state.csv`

Mobile 1 — reconciled current result

| Metric layer | Numerator | Denominator | Result | Evidence |

|-----|-----:|-----:|-----:|-----|

| ****Implemented automation (code)**** | ****6**** | ****27**** | ****22.2%**** | Six `RequestTest` classes on `main` @ `cee0de9` |

| ****Executed verified**** | ****1**** | ****27**** | ****3.7%**** | `POST mobilemembersession` historical evidence only |

| ****Sign-off-ready**** | ****1**** | ****27**** | ****3.7%**** | Pending QC4/Stage1 runs for five new endpoints |

| ****Scheduled CI**** | ****0**** | ****1**** | ****0%**** | No GitLab job |

****Implemented endpoints (code):****

1. `POST /mobile1api/v1/mobilemembersession`
2. `GET /mobile1api/v1/mobileowner`
3. `GET /mobile1api/v1/mobileOwnerMenu`
4. `GET /mobile1api/v1/mobileprofilemenu`
5. `GET /mobile1api/v1/mobilebeneficiaryByExt/{ext}`
6. `GET /mobile1api/v1/mobilebankinfobyroutingnum/{routingNum}`

****Full inventory:**** `01-inventory/mobile1-endpoint-current-state.csv`

CI/CD live validation (YAML-verified; live runs blocked)

| Platform | Job | Classification | Blocks merge/deploy? |

|-----|-----|-----|-----|

| GitLab | `scheduled\_regression\_job` (prime) | Scheduled regression — hard-fail on run | ****Not evidenced**** |

| GitLab | `scheduled\_metadataweb\_stage1` | Scheduled regression — hard-fail on run | ****Not evidenced**** |

| GitLab | `stage5\_smoke\_job` | Manual smoke | No |

| GitLab | Mobile 2 nightly | ****Not configured**** | N/A |

| GitHub Actions | Mobile 2 Dashboard + Nexus | Deployment validation (externally validated) | Workflow fail blocks ****that workflow**** — repo not in clone |

| Jenkins | IDP perf / V2 UI | Unknown / inferred | ****Not verified live**** |

Implementation status taxonomy (current)

| Status | Mobile 2 | Mobile 1 | V3 UI | V2 UI |

|-----|-----|-----|-----|-----|

| Verified automated + scheduled | 0 | 0 | Yes | Unknown |

| Verified automated + deployment/smoke | 1 (GHA slice) | 0 | Manual Stage5 | — |

| Verified automated + manual | Majority | 6 endpoints | — | Large corpus |

| Implemented; execution pending | YTD, banks GET-by-id | 5 endpoints | — | — |

| Intentionally excluded from master | PUT/DELETE banks, DELETE contrib | — | — | — |

| No validated automation | — | 21 endpoints | — | — |

| Unknown (live CI) | Schedule status | — | Live run TBD | Jenkins TBD |

Automated tooling inventory

| Tool | Status | Role |

|-----|-----|-----|

| `live\_validation\_build.py` | ****Available**** | Endpoint CSV + metrics register |

| `generate\_gs\_assessment\_deliverables.py` | ****Available**** | DOCX/XLSX/PDF |

| UP coverage Python tools | ****Available**** | V2/V3 inventory reconciliation |

| qTest REST / MCP | ****Blocked**** | No credentials |

| Jira MCP | ****Blocked**** | Discovery error |

| GitLab API / glab | ****Blocked**** | Expired token |

| JaCoCo (UniteMSC) | ****Verified in POMs**** | Service source-code coverage |

| SonarQube | ****Disabled**** on reviewed CI | `RUN\_SONARQUBE: false` |

****Why not harmonized:**** fragmented identifiers, no live ALM/CI feed, separate denominators, no central normalized register with freshness SLAs.

Minimum architecture (unchanged recommendation)

Extend Python collectors → versioned JSON/CSV → reconciliation with confidence → leadership + technical workbooks. No large new application until register proves insufficient.

Metric authority: `03-analysis/verified-metrics-register.csv` (rebuilt this validation)

Ci Gate Assessment

CI Gate Assessment — Government Savings Automation

****Assessment date:**** 2026-07-20

****Platforms reviewed:**** GitLab (local YAML + includes), Jenkins (doc/code references), GitHub Actions (repo scan)

Executive snapshot

| Platform | GS-related recurring jobs verified | Hard gates | Informational / manual |

|-----|-----|-----|-----|

| ****GitLab**** | 2 families: V3 UI nightly + metadataweb API nightly | Scheduled hard-fail on run | `prepare`, manual Stage5 smoke |

| ****GitHub Actions**** | Mobile 2 Dashboard vertical slice (external) | Deployment validation | Module expansion in progress |

| ****Jenkins**** | IDP perf suite scheduled; V2/Astro via Ant references | TBD — functional UI gate not confirmed | MSC perf manual; TB refresh jobs |

GitLab — verified jobs

1. `prime-test-automation` → `scheduled\_regression\_job`

| Attribute | Detail |

|-----|-----|

| **Trigger** | `only: schedules` |

| **Environment** | Stage 1 |

| **Suites** | `stage1-ue-regression-test` + `stage1-unite-regression-master` |

| **Technology** | Selenium + Cucumber/TestNG |

| **Scope** | V3 Universal Enrollment + Unite core (IDP login, contributions, withdrawals, CSR, etc.) |

| **Failure behavior** | `set +e` tracks failures; **exit 1** if either Maven phase fails |

| **Gate status** | **Scheduled regression — hard-fail on run** (not verified MR/deployment gate) |

| **Artifacts** | JUnit from both surefire directories |

| **Evidence** | `prime-test-automation/.gitlab-ci.yml` L23–80 |

| **Schedule** | KB references pipeline schedule #3961313 — **live schedule not re-verified in this pass** |

2. `api-test-automation` → `scheduled\_metadataweb\_stage1`

| Attribute | Detail |

|-----|-----|

| **Trigger** | `only: schedules` |

| **Environment** | Stage 1 |

| **Suite** | `stage1-api-metadata-pipeline` on `jsonapi-metadataweb` |

| **Failure behavior** | Maven test failure fails job |

| **Gate status** | **Hard gate** (scheduled) |

| **Evidence** | `api-test-automation/.gitlab-ci.yml` L21–51 |

| **Gap** | Mobile 1/2, accountweb, auth, enrollment **not** on this schedule |

3. `api-test-automation` — Mobile 2 nightly (planned)

| Attribute | Detail |

|-----|-----|

| ****Status**** | ****Not implemented**** in local `.gitlab-ci.yml` |

| ****Story**** | QA-1405 |

| ****Spec**** | `api-test-automation/mobile/project-documents/18-MOBILE2-VERIFICATION-AND-MAPPING-RUNBOOK.md` |

| ****Gate status**** | ****Planned**** |

4. UniteMSC microservice repos

| Attribute | Detail |

|-----|-----|

| ****Pattern**** | Shared `unitemsc\_template.yml` include |

| ****Local visibility**** | Stages: build → test → deploy; exact gate rules in external template |

| ****Gate status**** | ****Service build/deploy gate**** — not GS E2E regression |

| ****Evidence**** | `unite-mobile1/.gitlab-ci.yml` |

GitHub Actions

| Finding | Evidence |

|-----|-----|

| No `github/workflows/` in `api-test-automation` clone | Directory absent in audited repo |

| Mobile 2 Nexus + Dashboard vertical slice | Documented in `17-MOBILE2-NEXUS-GITHUB-ACTIONS-PIPELINE.md` |

| ****Dashboard slice validated with Chaitanya**** | Leadership pack 2026-07-17; Nexus publish/consume flow |

| Workflow repository | ****Not available in this audit clone**** — externally validated |

| ****Conclusion**** | ****Deployment validation path exists**** — separate from GitLab nightly regression; module expansion in progress |

Jenkins

| Job | Scope | Schedule | Gate? | Evidence |

```
|----|-----|-----|-----|-----|
| `AGSUP_IDP_REGRESSION_SUITE` | UP IDP performance | Weekdays ~3 AM | Perf regression —
not functional API/UI gate | perf tracker 2026-07-02 |

| `AGSUP_UNITE_MSC_ENDURANCE` | MSC login perf | Manual | Manual only | Same |

| `UNITE-TB-REFRESH` | V2 testbed refresh | On demand | Environment prep |
`unite/bin/build.xml` |

| `ASTRO-TB-REFRESH` | ASTRO testbed | On demand | Environment prep | `astro/bin/build.xml` |

| V2 UI regression (implicit) | V2 Unite | **Not verified** | **TBD** | Ant targets exist; job name not
in repo |

**Historical note:** Demand planning (Apr 2026) cited ~779+ combined V2+V3 nightly test cases
— **not verified as current pass rate or Jenkins job scope** in this assessment.
```

Gate classification summary

```
| Classification | Examples |

|-----|-----|

| **Hard gate — scheduled regression** | V3 GitLab nightly; metadataweb Stage1 nightly (fail job on
error) |

| **Deployment validation** | GHA Mobile 2 Dashboard slice (external) |

| **Hard gate — build/deploy** | UniteMSC service pipelines; accountowner Angular build |

| **Soft / manual** | Stage5 smoke (manual GitLab); MSC perf Jenkins; V2 Ant targets |

| **Planned** | Mobile 2 GitLab nightly (QA-1405); GHA module suite expansion |

| **None identified** | COPACS; full GS API nightly across all universal modules |
```

Suites that should run but are not on verified schedules

1. ****Mobile 2 master regression**** — QC4/Stage1 (QA-1405)
2. ****Mobile 1 module suites**** — QC4/Stage1
3. ****Universal accountweb / auth / financial**** API modules
4. ****ASTRO UI regression**** — assets exist; no GitLab nightly

5. ****V2 full nightly**** — may still be Jenkins-driven; not migrated to `prime-test-automation` schedule

6. ****MSC functional performance**** — scripts exist; no periodic trigger

Evidence register: `04-leadership/evidence-register.md`
