

Government Savings

Automation Coverage & CI Integration Assessment

Prepared by: Swapnil Patil
QA Automation & Quality Program Lead, Government Savings

Assessment Date: July 20, 2026
Rebuild validated: July 21, 2026
Version: 1.1
Classification: Confidential - Internal Use

Executive Summary

Government Savings automation is organized by business platform and operational activation - what is implemented, what runs on recurring schedules, and what awaits reactivation. A single GS-wide coverage percentage is not defensible. Inventory-share metrics (e.g. V2/V3 TestNG or qTest populations) appear in the technical appendix only, not as functional completeness.

Business Platform Coverage

Business area	Sub-area	Position	Implementation	Scheduled	Confidence
Unite MSC	Mobile 2 API	Mobile 2 automation is complete for the currently defined automatable business scope; destructive op...	Complete for automatable scope	Not scheduled - QA-1405 pending	High
Unite MSC	Mobile 2 API	Near-complete for documented business scope; harness endpoint excluded from automation numerator by ...	24/25 implemented	Not scheduled	High
Unite MSC	Mobile 1 API	Partial coverage with expansion in progress on owner profile beneficiary and bank routing	Partial - sprint expansion	Not scheduled	High
Unite MSC	Mobile Enrollment API	Pilot framework in place; endpoint inventory and automation scope not yet enumerated	Bootstrap smoke only	Not scheduled	Medium
Unite MSC	UniteMSC microservices	Service acceptance automation exists; not a substitute for BFF API regression	Substantial service-level assets	Per-repo GitLab pipeline	Medium
Unite MSC	Application source code	Application line coverage separate from business	Generated in CI	Service build/test gate	High

		automation; no coverage-delta MR gate			
Unite MSC	GitHub Actions	Deployment validation - not nightly business regression	Deployment slice validated	Workflow not in clone	Medium
Universal Platform	Universal Enrollment	Majority of current high-priority enrollment journeys automated in Modern Unite nightly	Near-complete for approved regression scope	scheduled_regression_job	High
Universal Platform	IDP / Authentication	Near-complete automation for current documented IDP regression scope	Near-complete for approved regression scope	scheduled_regression_job	High
Universal Platform	Withdrawals	Withdrawal domain automated in nightly; transfers adjacent (12 V2 methods)	Near-complete for withdrawal regression scope	scheduled_regression_job	High
Universal Platform	Entity / ABLE Entity	Partial coverage with expansion in progress; remaining work primarily Entity and newly migrated feat...	Partial - 6 scenarios in repo	Unknown pipeline inclusion	High
Universal Platform	Angular lib-ui	Component tests - not E2E business journey coverage	Component-level only	accountowner_build_tdd partial	Medium
Universal Platform	Universal API (scoped)	API automation exists beyond metadata; only metadataweb on GitLab schedule today	11 ops mapped in UP ledger	scheduled_metadataweb_stage1	High
Universal Platform	Performance journeys	Performance assets exist; not all journeys on recurring schedule	IDP perf scheduled; others manual	Partial scheduled	Medium

Verified Metrics Register

Area	Metric	Result	As of	Evidence
Unite MSC	Mobile 2 business endpoint automation (code)	96.0%	2026-07-20	api-test-automation/mobile/mobile2
Unite MSC	Mobile 1 endpoint automation (code)	22.2%	2026-07-20	mobile/mobile1
Unite MSC	Mobile 1 execution-verified endpoints	3.7%	2026-07-09	03-document-postman-coverage-matrix.md
Universal Platform	V3 scoped TestNG nightly share	86.9%	2026-07-01	universal-platform-coverage
Universal Platform	V3 GitLab scheduled job	100%	2026-07-20	prime-test-automation/.gitlab-ci.yml
Universal Platform	Metadataweb API GitLab job	100%	2026-07-20	api-test-automation/.gitlab-ci.yml

Conditional / Gap Metrics (do not quote as final)

The following metrics are leadership-relevant but not fully verified execution or scheduling evidence.

Area	Metric	Value	Status	Dependency
Unite MSC	Mobile 2 last documented master run	88.0%	Stale	Superseded for implementation; execution refresh pending
Unite MSC	Mobile 2 GitLab scheduled job	0%	Verified gap	QA-1405
Unite MSC	Mobile 1 GitLab scheduled job	0%	Verified gap	
Universal Platform	V2 UP-scoped qTest share	36.0%	Stale	
Unite MSC	GHA Dashboard vertical slice	100%	Verified external	Workflow repo not in clone

CI/CD Integration

GitLab: V3 scheduled_regression_job and metadataweb Stage1 - scheduled jobs exit non-zero on failure (not verified as MR merge gates). GitHub Actions: Mobile 2 Dashboard vertical slice externally validated; workflow repository not in audit clone. Jenkins: IDP performance scheduled; V2 UI recurring job not verified. Mobile 2 GitLab nightly not created (QA-1405).

Leadership Narrative

The team has meaningful automation across Government Savings. The current limitation is not the ability to build automation; it is establishing a consistent, traceable coverage model across Jira, qTest, repositories, and CI execution.

Document Control
