

QA Automation Squad Team Capability Profile

1. Overview

The QA Automation team is a **five-person** squad covering **Prime V2 and V3 UI automation, API automation, performance testing, and pipeline / cross-program coordination**. Execution strength is concentrated in **Java/Selenium/Cucumber/TestNG** UI suites and **REST API** validation using rest assure; **performance** is anchored in **JMeter**-oriented delivery with Jenkins integration. **Pipeline strategy, intake, and multi-team enablement** are led at the program level.

Coverage areas

Area	Snapshot
UI automation	Strong — dual track: V2 (legacy/member/CSR-heavy) and V3 (UE, IDP, CSR).
API automation	Strong and growing — dedicated tech-lead ownership; CI pipeline milestones in flight.
Performance testing	Concentrated — primary dedicated engineer; supported by broader team for env/auth dependencies.
Pipeline / DevOps integration	Growing — program-led; GitHub Actions / GitLab direction under evaluation per leadership updates.

Overall: The team is **strong in regression execution and suite growth** on V2/V3, with **clear depth in API and performance** where staffed; **strategy, backlog, and pipeline expansion** are actively owned alongside hands-on delivery.

2. Team Summary Snapshot

Name	Role / designation (program)	Experience (source)	Primary area	Key strength
Venkatesh Mallela	Sr. SDET	~10.5 years (resume)	Prime V2 automation	UI + API automation, regression expansion, SME-facing test design
Dinesh Kumar	SDET	~7.6+ years (resume summary)	Prime V3 automation	Java/UI automation, Cucumber/TestNG, prior QA team lead experience
Priti Choudhary	Performance Test Engineer	7 years (evaluation summary)	Performance + supporting automation	JMeter / load-stress on APIs; Jenkins/Git exposure
Sunil Godiyal	Tech Lead (Offshore), Sr. SDET	15+ years (assessment doc)	API automation (program focus)	Full-stack QA leadership background; Java/Selenium/API/ JMeter ; financial-domain depth
Swapnil Patil	Project Lead	16+ Years	Program delivery, pipelines, intake	Cross-team alignment, pipeline strategy, regression/program metrics

3. Individual Profiles

Venkatesh Mallela

Role / designation: Sr. SDET — Prime V2 automation (per leadership roster).
Experience: ~10.5 years IT (resume: Engineering Lead title at current employer; financial and insurance-related client work historically).
Primary focus area: V2 UI and API automation, nightly regression growth, member/CSR transaction coverage.

Core strengths

- **Selenium + Java + TestNG + BDD Cucumber** and **POM**-style frameworks; Maven-based delivery.
- **REST Assured, Postman, SOAP UI** for API validation; resume and summary docs emphasize UI + API together.
- **Test planning, reporting, Agile ceremonies**, coordination with module teams and leadership status rhythm (resume / strong-areas summary).
- **Interview feedback (technical): Good conceptual clarity on Postman/Rest Assured**; able to **automate with Selenium** and explain flow; **clear communication** and openness to feedback.
- Oracle/SQL exposure for validation (resume); JIRA/TestRail/Confluence familiarity.

Technical skills (relevant)

- Languages: Java, JavaScript (resume).
- Automation: Selenium, Cucumber, TestNG, POM, Maven.
- API: Rest Assured, Postman, SOAP UI.
- DB: Oracle, SQL.
- CI/CD: Jenkins, Git/GitHub (resume); interview notes **additional hands-on CI/CD** as a development area.

Current responsibilities (program)

- Own **Prime V2** regression expansion and stability; leadership update cites **454+** nightly TCs and growth in transfer, exchange, fund allocation, investment portfolio (member + CSR), release support.

Capability assessment

- **Strong** in end-to-end **V2 automation execution**, **API understanding**, and **communicating** test approach to stakeholders.
 - **Room to grow** in **greenfield framework architecture** (interview: worked on frameworks, not built from scratch), **deeper CI/CD** ownership, and a **dvanced SQL/PL-SQL** depth — without diluting current V2 delivery ownership.
-

Dinesh Kumar

Role / designation: Sr. SDET — Prime V3 regression (per leadership roster).

Experience: ~7.6 years QA (resume summary); prior role **Team Lead, Software Quality Assurance Delivery** (ALTRATA).

Primary focus area: V3 UI automation — Universal Enrollment, IDP, CSR — suite growth and stability.

Core strengths

- **Java**, **Selenium WebDriver**, **BDD Cucumber**, **TestNG**, **POM / hybrid** frameworks (resume).
- **REST Assured / Postman** for API validation; **JSON/XML/Excel (POI)** for data.
- **Jenkins** integration with automation suites; **Git** (GitHub, GitLab, Bitbucket).
- **MySQL**, **MongoDB** backend validation; **JMeter** listed as knowledge (resume).
- Prior **team lead of ~5 QAs**, process standardization (resume).

Technical skills (relevant)

- Java 8, Selenium, Cucumber, TestNG, Maven, POM.
- API: Postman, REST Assured.
- CI: Jenkins; VCS: Git.
- DB: MySQL, MongoDB.
- Types: functional, regression, E2E, defect lifecycle in JIRA.

Current responsibilities (program)

- Own **Prime V3** nightly regression (**325+** TCs: IDP, UE, CSR per leadership update); CSR personal information and ongoing IDP/UE expansion.

Capability assessment

- **Strong** in **V3-aligned UI automation**, **Java test scripting**, and **API validation** suitable for UE/IDP flows.
- **Room to grow** in **performance tool ownership** (JMeter noted but not primary evidence vs UI/API), and in **documented** GitLab-native pipeline patterns if program standardizes on GitLab.

No interview feedback file was present in Team Details; profile is resume-led.

Priti Choudhary

Role / designation: Performance Test Engineer (per leadership roster).

Experience: 7 years functional, automation, and performance testing (evaluation summary); Persistent Systems; ISTQB CTFL, Azure Fundamentals, Tricentis Testim noted.

Primary focus area: Performance engineering (JMeter-centric) with supporting automation/API work.

Core strengths

- **JMeter** — load and stress on **REST APIs**; building performance suites and plans; internal recognition for JMeter work (evaluation summary).
- **Grafana**, **Azure** monitoring exposure for observability (evaluation summary).
- **Java + Selenium + TestNG**, **Postman**, introductory **Rest Assured**; Solr/API suite experience cited.
- **Oracle**, **Snowflake**, **PostgreSQL** for validation and audit-style checks (evaluation summary).
- **Healthcare and banking/wealth** domain context; stakeholder communication and multi-project handling (evaluation summary).

Technical skills (relevant)

- Performance: JMeter (primary); BlazeMeter/Taurus called out in interview plan as **onboarding/focus** areas.
- Automation: Java, Selenium, TestNG; API: Postman, basic Rest Assured.
- CI: Jenkins, Git/GitLab (moderate depth per evaluation — to validate in practice).
- DB: Oracle/SQL family, Snowflake, PostgreSQL.

Current responsibilities (program)

- IDP login e2e performance in **Jenkins**; forgot username/password and related auth flows; coordination with auth/MFA owners; enrollment /metadata/accounts suite stability per leadership update.

Capability assessment

- **Strong** in **performance test design and execution** on APIs; **good fit** for hybrid **performance-first** role with mentorship on **framework-level Java automation** (evaluation: strong hire for performance QA with coaching on BlazeMeter/GitLab integration and deeper automation architecture).
-

Sunil Godiyal

Role / designation: Tech Lead (Offshore), Sr. SDET — **API automation** emphasis (per leadership roster).

Experience: 15+ years total; assessment positions prior titles as **QA Automation Manager / AVP** level with **Charles Schwab, Citi, HSBC, Credit Suisse, Barclays** (assessment doc).

Primary focus area: API automation pipeline, suite stability, CAT/Stage 5 API direction per program notes.

Core strengths

- **Java, Selenium, Rest Assured, Cucumber, Postman, TestNG, Jenkins, JMeter** — assessment: **excellent** stack match.
- **POM, factories, SOLID**, hybrid frameworks; **JMeter** used actively with **developer-facing performance reporting** (assessment).
- **Security/compliance awareness** — SAST, VAPT, ISO27001, GDPR, PCI-DSS context (assessment).
- **Leadership:** large QA teams, training, UAT/stakeholder management, agile process (assessment).
- **GitHub Copilot** in daily workflow (assessment).

Technical skills (relevant)

- Automation & API: Java, Selenium, Rest Assured, Cucumber, Postman, TestNG.
- Performance: JMeter.
- CI/CD: Git, Maven, Jenkins, Bitbucket.
- Cloud/DevOps: **Light** OpenShift noted; Docker/K8s not emphasized (assessment).

Current responsibilities (program)

- **API pipeline** via **GitHub Actions**; stable API suite; UI pipeline prototype for Unite V3 CSR; next focus CAT/Stage 5 API (leadership update).

Capability assessment

- **Strong in senior automation and API leadership, performance reporting, and financial-services** delivery patterns.
- **Room to grow in cloud-native** pipeline patterns (Docker/K8s/AWS) if the program's long-term standard requires it; assessment noted recent years **balanced toward leadership** — program role today is **hands-on tech lead** for API (align expectations with sustained IC delivery vs coordination load).

*Legacy . doc resume present in folder was not text-extracted; capability draws on **Overall Assessment – Sunil Godiyal.docx** and leadership roster.*

Swapnil Patil

Role / designation: **Project Lead** — program delivery, intake, leadership alignment (per leadership roster).

Experience: 15+ Years

Primary focus area: Pipeline strategy (Unite/Entity/API/performance), cross-team support (CAT smoke, Empower, etc.), operating model and backlog readiness.

Core strengths (from program documentation only)

- **Program execution** and **cross-team alignment** (leadership update: pipeline strategy, CAT smoke, Empower coordination).
- **Intake and prioritization** framing alongside regression metrics (V2/V3 counts, pipeline milestones).
- Interface with **engineering/DevOps** partners on pipeline direction (e.g., GitHub Actions vs GitLab evaluation referenced in leadership doc).

Technical skills (relevant)

- Not enumerated in Team Details sources; role is **leadership and integration** rather than primary IC automation in the cited roster.

Current responsibilities (program)

- Same as **Primary focus** above.

Capability assessment

- **Positioned for strategy, stakeholder alignment, and pipeline/program governance.**
 - **Profile completion:** Add **resume or written capability summary** to Team Details for skill-level transparency and succession planning.
-

4. Team Capability Coverage

- **UI automation Strong** — **V2** and **V3** (UE, IDP, CSR) with large nightly regressions (per leadership metrics).
- **API automation Strong** — dedicated **tech-lead** track; pipeline automation advancing.
- **Performance testing Focused** — primarily **one dedicated engineer**; broader team supports env/auth dependencies.
- **CI/CD / pipeline Growing** — GitHub Actions milestone for API; GitLab vs GitHub direction under discussion; Entity/Unite pipelines program-owned.
- **Test strategy / design Strong** at **V2/V3 execution layer**; **program lead** carries **portfolio-level** prioritization and intake.
