

5. Standard Performance Test YAML Library & Naming Conventions

Page is about?

- Serve as your *internal Taurus YAML library*
- Define naming conventions and versioning
- Enable your team to *plug-and-play* YAMLS confidently

1. YAML Repository Structure

Error rendering macro 'code': Invalid value specified for parameter '[Ljava.lang.Object;@34a2752d'

```
performance-universal/  
  taurus/  
    baseline.yaml  
    load-dashboard.yaml  
    spike-login.yaml  
    soak-csr.yaml  
    api-investments.yaml
```

2. YAML File Naming Convention

Element	Rule	Example
Feature	App/Module being tested	`dashboard`, `csr`, `api-login`
Test Type	`baseline`, `load`, `soak`, `spike`, `stress`	`load`
Optional Suffix	For large flows or versioning	`v2`, `2025q2`, `v1.1`
Final Format	`<testtype>-<feature>.yaml`	`soak-dashboard.yaml`

3. Base YAML Template (with Parameters)

yaml

```
execution:  
- concurrency: ${THREADS}  
  ramp-up: ${RAMP_UP}  
  hold-for: ${HOLD_FOR}  
  scenario: main  
  
scenarios:  
  main:  
    script: jmeter/dashboard_test.jmx  
    variables:  
      BASE_URL: "https://test-env.example.com"  
      USERNAME: "test_user"  
      PASSWORD: "abc123"
```

- Parameters Passed from Jenkins:
- THREADS, RAMP_UP, HOLD_FOR, BASE_URL

4. YAML Variants and When to Use

File	Description	Use Case
`baseline-login.yaml`	Light test with 5–10 users	Pre-release smoke
`load-dashboard.yaml`	Full 300-user ramp-up	Major release testing

`spike-csr.yaml`	Sudden burst for 2 mins	Flash sale / PROD-like surge
`soak-investments.yaml`	6 hr + steady load	Long-run regression tests

5. YAML Versioning Strategy

- `load-dashboard.yaml` stable, default run
- `load-dashboard-v2.yaml` test refactored scenario
- `load-dashboard-2025q2.yaml` for release-specific logic
- Use GitLab branches or tags to separate long-term YAMLs

6. YAML Execution Best Practices

- Validate YAML: `bzt yourfile.yaml --validate`
- Add comments in YAML for future updates
- Keep scenarios modular — don't hardcode endpoints/tokens
- Group similar YAMLs (e.g., `/csr/`, `/astro/`, `/unite/`)
- Always log duration, threads, and dataset used

7. YAML Templates & Examples

Templates Available in GitLab

[Baseline YAML Template](#)
[Load Test Template](#)
[Spike Test – Login Flow](#)
