

0.Updated Strategy: Deadlock Issue – IDP Login Performance Testing

Overview

- **Background:** Deadlock issue observed during IDP login load tests.
- **High Priority:** Leadership visibility required.
- **Objective:** Define benchmarks, pass/fail criteria, tools, execution process, reporting, and roadmap for IDP login performance testing.

Current Metrics & Benchmarks

- Current throughput: **6–10 logins/sec (peak)**.
- SLA Benchmark (to finalize): e.g., **95% of logins under 2 seconds**.
- Endurance requirement: **8–10 hr runs** needed to validate stability.

Pass/Fail Criteria

Formula for Average Response Time (ART):

AvgResponseTime= (ResponseTime_Page1 + ResponseTime_Page2 + ... + ResponseTime_PageN) / TotalPages × TotalUsers

- **Pass Example:** 95% requests < 2s, error rate < 1%, throughput SLA target.
- **Fail Example:** SLA breach sustained > 5 mins or error % too high.

Framework & Tools

- **JMeter** – Core scripting tool.
- **Taurus** – YAML-driven orchestration.
- **Jenkins** – Execution and scheduling.
- **BlazeMeter** – Centralized report storage & comparison.

Execution Strategy

- Short runs (**10–30 mins**) with varied user loads.
- Ramp-up patterns defined in Taurus.
- Jenkins pipeline for **nightly/ad-hoc runs**.

Next Steps

- Document **approved SLAs** and benchmarks.
- Standardize JMeter scripts for login + overview pages.
- Maintain **baseline reports in BlazeMeter**.
- Evaluate need for **dedicated performance environment**.

Child Pages

1. [Pass/Fail Criteria & SLA Definitions](#)
 - SLA throughput & response thresholds.
 - Error % limits.
 - ART formula explanation.
2. [Tooling & Execution Setup \(JMeter, Taurus, Jenkins\)](#)
 - JMeter scripts (auth, login, account).
 - YAML examples.
 - Jenkins job configuration & parameters.
3. [Existing Project Coverage \(IDP Login & Related Flows\)](#)
 - Catalog of current flows (idp-login, auth-server, account, metadata).
 - Jenkins-enabled vs pending scripts.
 - UI/Selenium flows & gaps.
4. [Execution Process Guide \(Jenkins + Validation\)](#)
 - Step-by-step Jenkins run instructions.
 - Validation checkpoints (console logs, BlazeMeter reports, SLA checks).

5. [BlazeMeter Baseline Reports](#)

- Confluence table of runs (date, users, duration, SLA results).
- Leadership weekly roll-up with charts and SLA trends.

6. [Future Enhancements \(Performance Testing Roadmap\)](#)

- **Endurance runs** (8–10 hr).
- **MFA performance testing**.
- **Adding universal services** to scope.
- **CI/CD nightly integration** for continuous SLA validation.
