

AM Troubleshooting Guide — QA Automation

Purpose

This space collects **practical fixes** and **runbooks** that do not belong in day-to-day regression docs. Typical topics:

- Oracle Stage **schema privileges** and **QA-only tables**
- **Prime V2 / V3** automation settings (e.g. BaseClass, placeholders, JVM args)
- **Evidence** (sample errors, ticket templates, DBA emails) attached to each issue

How to use this page

1. Find your topic in **Child pages** below (or in the page tree).
2. Follow the linked guide end-to-end: **root cause** **workaround** **code/DB steps** **validation**.
3. If something is missing, ask the **AM automation lead** to add a new child page and KB folder under `issues/<issue_id>/`.

Child pages (living documents)

Child page title	What it covers
Stage QA financial transaction tables — user schema workaround (\$\$QA_SCHEMA \$\$)	Offshore users without shared-schema INSERT on UII0/UIC: create QA_FIN_TXN / QA_FIN_INSTRUCTION in your schema; update performQueryReplacements + -Dqa.oracle.schema; DDL and validation.

Add a new row and a new Confluence child page each time a new `issues/<issue_id>/` folder is created in the KB.
