

Common GitLab push rejection error

Problem Recap

The error in your screenshot says:

```
remote: GitLab: Your git author name is inconsistent with GitLab account name
error: failed to push some refs
```

Root Cause

GitLab (Ascensus setup) has **pre-receive hooks** that block commits **if your Git username or email doesn't match** your GitLab profile (First Last <email@ascensus.com>).

Step-by-Step Fix (Recommended by DevOps)

Step 1: Set your Git username and email globally

In your terminal (Git Bash or IntelliJ terminal), run:

```
git config --global user.name "<First_Name Last_Name>"
git config --global user.email "<your Email@ascensus.com>"
-- Example:
git config --global user.name "Dinesh Kumar"
git config --global user.email "Dinesh.Kumar@ascensus.com"

-- Verify:
git config --global user.name
git config --global user.email
```

Step 2: Fix the author on your last commit (if already committed)

If you've already committed code **with the wrong author name**, you must amend it:

```
git commit --amend --author="First_Name Last_Name <FName.LName@ascensus.com>"
-- Example:
git commit --amend --author="Dinesh Kumar <Dinesh.Kumar@ascensus.com>"
```

Then push it again:

```
git push --force
```

Use --force only if you're working alone on the branch. For shared branches, coordinate with your team first.

Step 3: Push Again

Now that your author is correct:

```
git push origin feature/QA-137-IDP-ForgotPWD
```

Your push should succeed.

Optional: Set Local (Repo-Specific) Username/Email

If you want to configure just for this repo and not globally:

```
git config user.name "<First_Name Last_Name>"
git config user.email "<your Email@ascensus.com>"
-- Example:
git config user.name "Dinesh Kumar"
git config user.email "Dinesh.Kumar@ascensus.com"
```

Final Checklist for GitLab Author Validation

Checkpoint	Command
Set name	git config --global user.name "Dinesh Kumar"
Set email	git config --global user.email "Dinesh.Kumar@ascensus.com"
Amend commit	git commit --amend --author="Dinesh Kumar <Dinesh.Kumar@ascensus.com>"
Push	git push (or --force if amended)
Verify name	git config user.name
Verify email	git config user.email

Solution for IntelliJ Users

Step-by-Step Fix (via IntelliJ Terminal)

- **Open IntelliJ**
Go to **View > Tool Windows > Terminal**
- **Set Correct Author Globally** (one-time setup):

```
git config --global user.name "Dinesh Kumar"
git config --global user.email "Dinesh.Kumar@ascensus.com"
```

- **Fix Last Commit (if already made)**

```
git commit --amend --author="Dinesh Kumar <Dinesh.Kumar@ascensus.com>"
```

- **Push Again (force push due to amended commit)**

```
git push --force
```

Be careful with --force. Only use it if you're not sharing the branch yet.

Optional: Check Current Git Identity

```
git config user.name
git config user.email
```

Where to Check/Set in IntelliJ UI (optional)

1. Go to **File > Settings (Preferences on macOS)**
2. Navigate to:
Version Control > Git
3. Set the **User Name** and **Email** fields
 - Name: Dinesh Kumar
 - Email: Dinesh.Kumar@ascensus.com

4. Click **OK**, then retry your push.

Solution for Git GUIs (SourceTree or VS Code)

In SourceTree

1. Go to **Tools > Options > Git tab**
2. Under **User Information**, set:
 - **Full Name:** Dinesh Kumar
 - **Email Address:** Dinesh.Kumar@ascensus.com
3. Click **OK**
4. Right-click on your last commit **Amend commit**
 - Adjust author if needed
 - Re-push (you may need to force push)

In VS Code

- Open terminal (Ctrl+`)
- Set Git config:

```
git config --global user.name "Dinesh Kumar"
git config --global user.email "Dinesh.Kumar@ascensus.com"
```

- Amend commit if needed:

```
git commit --amend --author="Dinesh Kumar <Dinesh.Kumar@ascensus.com>"
```

- Push:

```
git push --force
```

Summary (One-Liner Fix for Experienced Users)

```
git config --global user.name "Dinesh Kumar" && \
git config --global user.email "Dinesh.Kumar@ascensus.com" && \
git commit --amend --author="Dinesh Kumar <Dinesh.Kumar@ascensus.com>" && \
git push --force
```
