

GS Delivery – qTest Folder Reorganization Plan

Page is about?

Purpose:

The current qTest manual test case structure for the GS Delivery project is disorganized, inconsistent, and not scalable. This plan outlines a **new folder structure strategy**, along with **best practices and team guidelines**, to improve:

- Modularity and traceability
- Reuse and version control
- Automation support
- Reporting and dashboard alignment

Goals

- Eliminate duplication by managing **Master Test Suites**
- Establish clear folder hierarchy across **Astro, Prime, UE, etc.**
- Enable traceability to **features/stories**
- Create a sustainable process for future growth and regression reuse

Finalized Folder Structure Overview

Core Principles

- **Modular:** Master Suites organized by platform (Astro, Unite, Universal) and portal (CSR, Employer, Employee).
- **Reusable:** Common test cases live in one place and are referenced—not duplicated.
- **Plan-Specific Support:** Variants (NYD, MID, ILD, AKB, etc.) stored in **plan subfolders**.
- **Traceable:** Every case links to a JIRA story, epic, or automation tag.

Proposed Folder Structure (Modular + Reusable)

S Delivery Manual Test Repository

GS Delivery Manual Repository
Master Test Suites (Single Source of Truth)

Astro

- CSR Registration
 - Common + Plan-Specific
- Employer Portal Registration
 - Common
- Employee Portal Registration
 - Common

Unite

529

- Registration
 - Legacy Member Registration
 - IDP Member Registration
- Account Update
 - CSR Profile PII data Update
 - CSR Profile Bank Information Update
- Withdrawals
 - CSR Member WDRWL Common + Plan-Specific (e.g., NYD, AKB)

Able

- Registration
 - Legacy Member Registration
 - IDP Member Registration
- Account Update
 - CSR Profile PII data Update
 - CSR Profile Bank Information Update
- Withdrawals
 - CSR Member WDRWL Common + Plan-Specific (e.g., NYD, AKB)

- Unite Entity Management
 - Registration
 - Legacy Member Registration
 - Entity Login
 - Entity login
 - Withdrawals
 - CSR Member WDRWL Plan folders

Universal Platform

- Registration
 - Legacy Member Registration
 - IDP Member Registration
- Account Update
 - CSR Profile PII data Update
 - CSR Profile Bank Information Update
- UE Enrollment (General, Special)
 - CSR Member WDRWL Common + Plan-Specific (e.g., NYD, AKB)

Folder & Test Case Naming Conventions

Level	Naming Format	Example
Folder	[Platform] -> [Module] -> [Sub-Module]	Unite -> 529 -> Withdrawals
Test Case	[Module]: [Feature] - [Type] - [Short-Desc]	Withdrawals: CSR - Positive - Non-Qual AO by Bank with Partial and Prorated
Plan Variant	Suffix with plan code inside case name OR use subfolder	WDRWL - CSR - Positive - NYD - SingleBene ACH
Tags	@regression @smoke @prime @ue @plan_nyd	Used for filtering, reports, and automation traceability

Fields <i>(Note: These fields will be required while creating TC)</i>	Add/Re-purpose fields ■ Branding ■ Feature ■ Type ■ Automation Status	Branding: For Common - select "all" or "newyork" Feature: TC Based on Feature e.g. <i>Unite_FO_Member_Login</i> Type: Manual, automation, performance, end-end etc Automation Status: Need Automation, Automated, Will not automated etc
--	--	---

*Use versioning in qTest rather than copy-paste. Link release folders to Master via clone/reference.
Avoid duplicate test logic across plans—reference shared tests where business logic overlaps.*

Key Principles to Follow

Practice	Description
Master Suites	Maintain reusable tests here. Do NOT copy-paste into releases. Link/clone if needed.
Versioning	Use qTest built-in versioning when tests are updated.
Naming Conventions	Module - Feature - TestCaseType - [Short Desc] (e.g., Astro - Login - Positive - Valid credentials)
Traceability	Link test cases to JIRA stories, epics, or automation tags
Execution Folders	Only release/project folders should be used for test execution
Ownership	Each QA module lead is responsible for organizing their Master folder

Reporting & Dashboard Best Practices

Objective	Guideline
Manual vs Automated Split	Tag test cases with @manual or @automated for quick dashboard filtering
Regression Health	Maintain automation coverage field + dashboard filter
Execution Metrics	Use only Release folders to trigger test runs for dashboard tracking
Comparison Reports	Build dashboards comparing % automated vs manual per feature/module/plan

Sample filters: @529 @regression @manual, @ue @automated @mid, @plan_nyd

Rules of Thumb – What NOT to Break

- **Do NOT copy-paste** test cases across modules or release folders
- **Do NOT modify** Master test cases without version control
- **Do NOT create plan-specific logic in shared test case without conditions**

Use **clone** for release, **tag** for plan, and **subfolder** for complex variants

Recommendations

- Implement **qTest custom fields**:
 - Automation Status, Plan Code, Last Reviewed
- Schedule **monthly review checkpoints** for duplicate test detection
- Use **Confluence mapping page**: Test Case Story Automation Script Jenkins Job

QA Responsibilities

Role	Responsibility
QA Module Owner	Maintain Master folder, review new additions, enforce naming

Automation Leads	Ensure traceability tags, maintain automation status field
QA Team (All Members)	Follow structure, avoid duplication, update links

Suggested qTest Improvements

- Enable **release tags** and link to JIRA fix versions
- Use **qTest version control** instead of copy-paste edits
- Add **automation coverage mapping field**
- Establish **review checkpoints** for test quality + duplication

qTest Data Queries

- To find who creating test case using **old** flow based on Create Date: *Module in 'MD-15934 * ARCHIVAL *' and Created Date > '10/01/2025'*
- To find who creating test case using **new** flow based on Create Date: *Module in 'MD-13301 * Master Test Plan Suite' and Created Date > '10/01/2025'*
