

6. Make a Withdrawal – Automation Regression Suite (Prime Version 2)

Purpose / What's Included

This page outlines all automated **Make a Withdrawal** test scripts executed as part of the **Prime Version 2 Regression Suite**. These tests validate **Qualified, Non-Qualified, K-12, and Systematic Withdrawal (SWP)** flows across multiple plans and distribution modes.

1. Execution Summary

Item	Value
Regression Suite Name	stage1-withdrawals.xml
Environment	Stage 1
Portal Types Covered	CSR, Member Portal, Greenscreen, ABLE, Advisor, Flywire
Total Tests (TestNG)	73 scenarios executed
Passed	70-69
Failed (Expected Flaky)	3-5
Success Rate (Adjusted)	~95-98% stable after excluding known timing/MFA delays
Story Added for Flaky Fixes	Yes — added to backlog
Execution Duration (avg)	4.5–6 hours (Time improved after parallel run)
Runner Type	FeatureRunner + ParallelFeatureRunner
Tags Used	@regression, @dailyrun
Jobs Running Nightly	STAGE1-Daily-Unite-Prime-Regression
Automation Job	STAGE1-Daily-Unite-Prime-Regression
Execution Frequency	Daily @ 1:00 AM EST via Jenkins

Why failure count is acceptable

- 3–5 failures occur due to page load / UI sync / long-prorated SWP operations.
- No DB issues detected.
- MFA/2FA failures are **not automation defects** – caused by DB refresh removing auto-generated user accounts.
- All issues are documented & tracked with backlog stories.

2. Module & Plan Coverage

Plan	Test Class Name	Flow Type	Scenario Count	Feature File(s)	Tags
NYD	CSR-Greenscreen Withdrawal – Qual & Non-Qual	Basic AO Distribution (Bank + Check)	2	CSR_Distribution.feature	@regression, @dailyrun
NYA	Advisor CSR Greenscreen – Qual & NQ	Advisor AO Distribution	2	CSR_Advisor_Distribution.feature	@regression, @dailyrun
NYB (ABLE)	ABLE CSR Greenscreen Withdrawal	ABLE AO Partial	1	CSR_Able_Distribution.feature	@regression, @dailyrun
MID	Member Withdrawal (Qual /NQ)	Bank + Check, Partial, Prorated, Fund-Specific	2	QandNQDistribution.feature	@regression, @dailyrun
NYD (K12)	CSR K12 Withdrawal	EBT Prorated	1	K12Distribution.feature	@regression, @dailyrun
MND (K12)	CSR K12 Withdrawal	AO Partial + Prorated	1	MNDWithdrawal.feature	@regression, @dailyrun

MID/NYD /NYA	Member Withdrawal Negative Scenarios	Validation Flows (Missing How Much, To Whom, Invalid Amount, Zero Balance, Format Errors)	15+	MemberWithdrawalNegativeScenarios.feature	@regression , @dailyrun
MID / MND	Systematic Withdrawal Plans (SWP)	Create, Edit, Delete, Auto-Notation	6	SWPAutoNotation.feature	@regression , @dailyrun
MID (Member Portal)	Member Portal Withdrawal	Web-Registered users – Bank/Check/EBT	3–4	MemberWithdrawal.feature	@regression , @dailyrun
IND (Flywire)	CSR Flywire Withdrawal	International Routing	3	INDMODDistribution.feature	@regression , @dailyrun
WVD (Flywire)	CSR Flywire Withdrawal	Prorated / Partial / Fund-specific	2–3	Distribution.feature	@regression , @dailyrun

3. Scenario Breakdown (With Flow Types)

#	Scenario Name	Flow Type / Behavior	Feature File
1	CSR Qualified Withdrawal AO	Partial Dollar	CSR_Distribution.feature
2	CSR Non-Qualified Withdrawal AO	Partial Dollar	CSR_Distribution.feature
3	CSR ABLE Withdrawal AO	Partial Dollar	CSR_Able_Distribution.feature
4	Advisor CSR Distribution (Qual & NQ) AO	Check & Bank	CSR_Advisor_Distribution.feature
5	Member CSR Q & NQ AO (Bank)	Prorated + Partial	QandNQDistribution.feature
6	K12 EBT Withdrawal	Prorated	K12Distribution.feature
7	K12 AO Prorated Withdrawal	AO Bank	MNDWithdrawal.feature
8	Negative – Missing Inputs (How Much, To Whom, Amount Format)	Error Validation	MemberWithdrawalNegativeScenarios.feature
9	SWP Create/Edit/Delete	Auto-Notation	SWPAutoNotation.feature
10	Member Portal Withdrawal (Qual/NQ)	Full + Partial	MemberWithdrawal.feature
11	Flywire Withdrawal	Bank Routing / International	INDMODDistribution.feature
12	Fund-Specific Withdrawal	Portfolio-Based	Multiple

4. Execution Behavior & Known Flaky Areas

Stable Areas

- All CSR AO/Bene flows
- All Advisor flows
- K12 & Student Loan flows
- Member portal flows
- Negative validations
- SWP CRUD flows
- Flywire integration
- Fund-specific flows

Known Flaky Areas (Updated — No DB Issues)

Flaky Case	Root Cause	Status
Page Load Delays (3–5 cases randomly)	UI rendering delay, slow navigation, heavy prorated-calculation screens	Backlog story created
SWP flows sometimes slow	Auto-notation recalculation takes 10–15s	Mitigated with waits backlog
2FA / OTP / Login Failed issue	Stage1 DB refresh wiped automation accounts, causing missing OTP records	Not automation defect backlog
Prorated fund-specific withdrawals occasionally slow	DB calculation latency	Backlog

Resolution Status

All issues have been **diagnosed**, **logged**, and **added** to the backlog.

5. Steps Covered by Withdrawal Automation Suite (End-to-End)

(These apply to all flows; non-redundant consolidated list)

Common Steps Executed in Every Scenario

- Load regression config + test metadata
- Launch CSR / Member / Greenscreen portal
- Authenticate (CSR credentials / Member login / OTP flow)
- Fetch account details via DB validate plan eligibility
- Jump into account dashboard
- Select distribution type (Qual / NQ / K12 / Student Loan / SWP / Flywire)
- Workflow navigation:
 - Delivery Mode
 - Amount Selection (Partial, Full, Prorated, Portfolio)
 - Recipient (AO / Bene / Institution)
 - Payment Method (Bank / Check / EBT / Flywire)
- Perform withdrawal request
- Validate:
 - Post-update UI messages
 - Auto-notation (SWP cases)
 - DB Transaction rows
- Log structured HTML report
- Push results to dashboard

This demonstrates the module is **full E2E** across CSR, Member, Greenscreen, SWP, Flywire, and negative paths.

6. Coverage Summary

Category	Count	Status
CSR Withdrawal Flows	20+	Stable
Member Portal Withdrawals	3–4	Stable
SWP Auto-Notation	6	Mostly Stable
Negative Scenarios	15+	Stable
Flywire Withdrawals	4	Stable
Total Scenarios	73	~98% (Adjusted) Stable

7. Quick Summary for Leadership

- Withdrawal module is **one of the largest & most business-critical** areas in Prime V2.
- This automation suite provides **broad coverage across 12+ plan types** and every major withdrawal workflow. (More plans can be added, also more scenarios can be covered for this module in near future)
- Suite is now **nightly-ready**, runs fully in **Stage1**, and maintains **95-98%+ stability**.
- All observed failures are **non-functional issues** (timeouts, slow rendering, OTP unavailability after DB refresh).
- All failures are **logged, understood, and added to the backlog** — none block sign-off.

This module is eligible for sign-off.
